

Lake Resources NL: Presents in Benchmark World Tour on Lithium Brines

28.07.2020 | [ABN Newswire](#)

Brisbane, Australia - Clean lithium developer [Lake Resources NL](#) (ASX:LKE) (FRA:LK1) (OTCMKTS:LLKKF) has announced that Lake's Managing Director, Steve Promnitz, will present in Benchmark Mineral Intelligence World Tour Online, with a focus on lithium brines and Argentina, on Thursday, July 30, 2020 - 4pm GMT (London), 11am ET (NYC), 8am PT.

Andrew Miller and Jose Hofer, of Benchmark Mineral Intelligence, will provide an update on the lithium ion battery supply chain to electric vehicles.

To access the presentation, together with other presenters, including Galaxy Resources and Neo Lithium, please register via the link provided:

<https://www.benchmarkminerals.com/events/world-tour-online/>

The webcasts will be available a few days later on the Benchmark Minerals website to registered parties.

About Lake Resources NL:

[Lake Resources NL](#) (ASX:LKE) is a lithium exploration and development company focused on developing its three lithium brine projects and hard rock project in Argentina, all owned 100%. The leases are in a prime location among the lithium sector's largest players within the Lithium Triangle, where half of the world's lithium is produced. Lake holds one of the largest lithium tenement packages in Argentina (~200,000Ha) secured in 2016 prior to a significant 'rush' by major companies. The large holdings provide the potential to provide consistent security of supply demanded by battery makers and electric vehicle manufacturers.

The Kachi project covers 69,000 ha over a salt lake south of FMC's lithium operation and near Albemarle's Antofalla project in Catamarca Province. Drilling at Kachi has confirmed a large lithium brine bearing basin over 20km long, 15km wide and 400m to 800m deep. Drilling over Kachi (currently 16 drill holes, 3100m) has produced a maiden indicated and inferred resource of 4.4 Mt LCE (Indicated 1.0Mt and Inferred 3.4Mt) within a 8-17 Mt LCE exploration target (refer ASX announcement 27 November 2018).

A direct extraction technique is being tested in partnership with Lilac Solutions, which has shown 80-90% recoveries and lithium brine concentrations in excess of 3000 mg/L lithium and is planned to be trialled on site in tandem with conventional methods as part of a PFS to follow the resource statement. Scope exists to unlock considerable value through partnerships and corporate deals in the near term.
