

ExxonMobil Reports Results for Second Quarter 2020

31.07.2020 | [Business Wire](#)

- Global oversupply and COVID-related demand impacts drive second quarter loss of \$1.1 billion
- On track to meet or exceed 2020 capital and cash operating spend reduction targets
- Supporting COVID-19 response by reconfiguring operations to increase production of hand sanitizer and raw materials for protective equipment for first responders

Capital and Exploration Expenditures	5,327	8,079	7,143	12,470	14,969

[Exxon Mobil Corp.](#) today announced an estimated second quarter 2020 loss of \$1.1 billion, or \$0.26 per share assuming dilution. Results included a positive noncash inventory valuation adjustment from rising commodity prices of \$1.9 billion, or \$0.44 per share assuming dilution. Capital and exploration expenditures were \$5.3 billion, nearly \$2 billion lower than first quarter reflecting previously announced spend reductions.

Oil-equivalent production was 3.6 million barrels per day, down 7 percent from the second quarter of 2019, including a 3 percent decrease in liquids and a 12 percent decrease in natural gas, mainly reflecting the impacts of COVID-19 on global demand including economic and government mandated curtailments.

“The global pandemic and oversupply conditions significantly impacted our second quarter financial results with lower prices, margins, and sales volumes. We responded decisively by reducing near-term spending and continuing work to improve efficiency by leveraging recent reorganizations,” said Darren W. Woods, chairman and chief executive officer. “The progress we’ve made to date gives us confidence that we will meet or exceed our cost-reduction targets for 2020 and provides a strong foundation for further efficiencies.”

“We have increased debt to a level we feel is appropriate to provide liquidity, given market

uncertainties. Based on current projections, we do not plan to take on any additional debt.##8221;

The company has identified significant potential for additional reductions and is undertaking a comprehensive evaluation across the businesses on a country-by-country basis. Additional details will be provided when plans are finalized.

During the quarter, ExxonMobil continued to support COVID-19 response efforts by increasing production of isopropyl alcohol used in sanitizers and specialized polypropylene used in medical masks and gowns. In April, the company reconfigured manufacturing operations in Baton Rouge, Louisiana, to produce and bottle medical-grade hand sanitizer for donation to frontline workers across the U.S. and to the U.S. Air Force. In addition, ExxonMobil donated equipment and contributed to relief efforts around the world, as outlined on the company's website.

Second Quarter 2020 Business Highlights

Upstream

- Market prices for crude oil increased following the sharp decline at the end of the first quarter; however, average second quarter realizations for crude oil and natural gas were significantly lower reflecting the continued oversupply conditions in the market and the impacts of COVID-19 on global demand.
- Liquids volumes were down 7 percent from first quarter reflecting the impact of lower demand, including economic and government mandated curtailments. Excluding these curtailment impacts, liquids volumes increased 5 percent. Natural gas volumes were 15 percent lower driven by seasonal demand in Europe and scheduled maintenance.

Downstream

- Industry fuels margins were considerably lower than in the first quarter, reflecting the impacts of COVID-19 on demand for gasoline and jet fuel. The company experienced unfavorable mark-to-market derivative impacts associated with its trading activity, compared to favorable impacts in the previous quarter, driven by significant volatility in commodity prices across the periods.
- Average refinery utilization was down significantly from first quarter on lower demand, as the company spared about 30 percent of its refining capacity. Over the course of the quarter, utilization increased in line with global fuel demand.

Chemical

- Chemical margins were largely consistent with first quarter. Chemical sales volumes however, while benefiting from resilient demand for essential products, were lower than first quarter driven by the impacts of COVID-19 on global demand.
- The company continues to support COVID-19 response efforts, further optimizing processes to increase its monthly production of specialized polypropylene, used in masks and medical gowns, and isopropyl alcohol, used in sanitizer, by more than 10 percent.

Strengthening the Portfolio

- While operations were impacted by logistical restrictions resulting from COVID-19, the company demonstrated production capacity of 120,000 gross barrels of oil per day at the Liza Phase 1 development offshore Guyana. Topsides integration is underway in Singapore on a second floating production, storage and offloading vessel, with production capacity up to 220,000 gross barrels of oil per day, to support the Liza Phase 2 development.
- During the quarter, ExxonMobil commenced operations at its new Delaware central processing and exporting facility in Eddy County, New Mexico. This new processing and stabilization facility enhances the company's integration advantages by collecting and processing oil and natural gas from its assets in the Delaware Basin for delivery to Gulf Coast markets.

Disciplined Investing and Expense Management

- During the quarter, ExxonMobil made significant progress on its previously announced capital and cash operating spend reductions. Planned reductions to the company's capital investment program for 2020, from \$33 billion to \$23 billion, are ahead of schedule, reflecting increased efficiencies, lower market prices, and slower project pace. The expected decrease in cash operating expenses of about 15 percent is also ahead of schedule, capturing savings from increased efficiencies, reduced activity, and lower energy costs and volumes.

Advancing Innovative Technologies and Products

- During the quarter, ExxonMobil launched a first-of-its-kind high-frequency network of sensors designed to monitor and detect methane emissions in the Permian Basin. Project Astra is a collaboration with the University of Texas, Gas Technology Institute, Environmental Defense Fund and Pioneer Natural Resources that could provide a more affordable, efficient solution to address methane emissions over large areas of operations.
- ExxonMobil has renewed a five-year agreement with Princeton University's Andlinger Center for Energy and Environment to accelerate research, development and deployment of energy and environmental technologies with a focus on carbon capture and storage, carbonate fuel cells, and lower-emission technologies. The collaboration extends ExxonMobil's participation in Princeton's E-filiates Partnership, which began in 2015.
- Scientists from ExxonMobil, the Georgia Institute of Technology and Imperial College of London published joint research on potential breakthroughs in a new membrane technology that could reduce emissions and energy intensity associated with refining crude oil. Laboratory tests indicate the patent-pending membrane could be used to replace some heat-intensive distillation at refineries in the years ahead.

First Half 2020 Financial Updates

During the first six months of 2020, [Exxon Mobil Corp.](#) purchased 6 million shares of its common stock for the treasury at a gross cost of \$305 million. These shares were acquired to offset dilution in conjunction with the company's benefit plans and programs. The corporation will continue to acquire shares to offset dilution in conjunction with its benefit plans and programs.

ExxonMobil will discuss financial and operating results and other matters during a webcast at 8:30 a.m. Central Time on July 31, 2020. To listen to the event or access an archived replay, please visit www.exxonmobil.com.

Cautionary Statement

Outlooks, projections, goals, targets, descriptions of strategic plans and objectives, and other statements of future events or conditions in this release are forward-looking statements. Actual future results, including financial and operating performance; the impact of the COVID-19 pandemic on results; planned capital and cash operating expense reductions and ability to meet announced reduction objectives; total capital expenditures and mix; cash flow, dividend and shareholder returns; business and project plans, timing, costs and capacities; resource recoveries and production rates; accounting and financial reporting effects resulting from market developments and ExxonMobil's responsive actions; and the impact of new technologies, including to increase capital efficiency and production and to reduce greenhouse gas emissions and intensity, could differ materially due to a number of factors. These include global or regional changes in the supply and demand for oil, natural gas, petrochemicals, and feedstocks and other market conditions that impact prices and differentials; the outcome of government policies and actions, including actions taken to address COVID-19 and to maintain the functioning of national and global economies and markets; the impact of company actions to protect the health and safety of employees, vendors, customers, and communities; actions of competitors and commercial counterparties; the ability to access short- and long-term debt markets on a timely and affordable basis; the severity, length and ultimate impact of COVID-19 on people and economies; reservoir performance; the outcome of exploration projects and timely completion of development and construction projects; changes in law, taxes, or regulation including environmental regulations, and timely granting of governmental permits; war, trade agreements and patterns, shipping blockades or harassment, and other political or security disturbances; opportunities for and regulatory approval of potential investments or divestments; the actions of competitors; the capture of efficiencies within and between business lines and the ability to maintain near-term cost reductions as ongoing efficiencies while maintaining future competitive positioning; unforeseen technical or operating difficulties; the development and competitiveness of alternative energy and emission reduction technologies; the results of research programs; the ability to bring new technologies to commercial scale on a cost-competitive basis, including emission reduction technologies and large-scale hydraulic fracturing projects; general economic conditions including the occurrence and duration of economic recessions; and other factors discussed under the heading Factors Affecting Future Results on the Investors page of our website at www.exxonmobil.com and in Item 1A of ExxonMobil's 2019 Form 10-K. We assume no duty to update these statements as of any future date.

Frequently Used Terms and Non-GAAP Measures

This press release includes cash flow from operations and asset sales. Because of the regular nature of our asset management and divestment program, we believe it is useful for investors to consider proceeds associated with the sales of subsidiaries, property, plant and equipment, and sales and returns of investments together with cash provided by operating activities when evaluating cash available for investment in the business and financing activities. A reconciliation to net cash provided by operating activities for 2020 periods is shown on page 7 and for 2020 and 2019 periods in Attachment V.

This press release also includes cash flow from operations and asset sales excluding working capital. We believe it is useful for investors to consider these numbers in comparing the underlying performance of our business across periods when there are significant period-to-period differences in the amount of changes in working capital. A reconciliation to net cash provided by operating activities for 2020 periods is shown on page 7 and for 2020 and 2019 periods in Attachment V.

This press release also includes earnings/(loss) excluding identified items, which are earnings/(loss) excluding individually significant non-operational events with an absolute corporate total earnings impact of at least \$250 million in a given quarter. The earnings/(loss) impact of an identified item for an individual segment may be less than \$250 million when the item impacts several segments. We believe it is useful for investors to consider these figures in comparing the underlying performance of our business across periods when one, or both, periods include identified items. A reconciliation to earnings is shown for 2020 and 2019 periods in Attachments II-a and II-b. Corresponding per share amounts are shown on page 1 and in attachment II-a, including a reconciliation to earnings/(loss) per common share – assuming dilution (U.S. GAAP).

This press release also includes total taxes including sales-based taxes. This is a broader indicator of the total tax burden on the corporation's products and earnings, including certain sales and value-added taxes imposed on and concurrent with revenue-producing transactions with customers and collected on

behalf of governmental authorities (sales-based taxes). It combines Income taxes; and Total other taxes and duties; with sales-based taxes, which are reported net in the income statement. We believe it is useful for the corporation and its investors to understand the total tax burden imposed on the corporation's products and earnings. A reconciliation to total taxes is shown as part of the Estimated Key Financial and Operating Data in Attachment I.

References to the resource base and other quantities of oil, natural gas or condensate may include estimated amounts that are not yet classified as proved reserves; under SEC definitions, but which are expected to be ultimately recoverable. The term project; as used in this release can refer to a variety of different activities and does not necessarily have the same meaning as in any government payment transparency reports. Further information on ExxonMobil's frequently used financial and operating measures and other terms including Cash flow from operations and asset sales; and Total taxes including sales-based taxes; is contained under the heading Frequently Used Terms; available through the Investors; section of our website at www.exxonmobil.com.

LIFO Inventory

Crude oil, products and merchandise inventories are carried at the lower of current market value or cost, generally determined under the last-in first-out method (LIFO). The corporation's results for the first quarter of 2020 included an after-tax earnings charge of \$2,096 million from writing down the book value of inventories to their market value at the end of the period. The corporation's results for the second quarter of 2020 include an after-tax earnings benefit of \$1,922 million, mainly reflecting the partial reversal of the first quarter charge due to rising commodity prices. The earnings impact may be adjusted further in future quarters based on prevailing market prices at the time of future evaluations. At year-end, any required adjustment is considered permanent and is incorporated into the LIFO carrying value of the inventory.

Reference to Earnings

References to corporate earnings mean net income attributable to ExxonMobil (U.S. GAAP) from the consolidated income statement. Unless otherwise indicated, references to earnings, Upstream, Downstream, Chemical and Corporate and financing segment earnings, and earnings per share are ExxonMobil's share after excluding amounts attributable to noncontrolling interests.

[Exxon Mobil Corp.](#) has numerous affiliates, many with names that include ExxonMobil, Exxon, Mobil, Esso, and XTO. For convenience and simplicity, those terms and terms such as corporation, company, our, we, and its are sometimes used as abbreviated references to specific affiliates or affiliate groups. Similarly, ExxonMobil has business relationships with thousands of customers, suppliers, governments, and others. For convenience and simplicity, words such as venture, joint venture, partnership, co-venturer, and partner are used to indicate business and other relationships involving common activities and interests, and those words may not indicate precise legal relationships.
