

Nicola Mining Inc. Outcrop Chip Sampling at the Dominion Property Returns Grades of 34.9 Grams Au and 176 Grams Ag per Tonne

26.10.2020 | [Newsfile](#)

Vancouver, October 26, 2020 - [Nicola Mining Inc.](#) (TSXV: NIM) (FSE: HLI) (the "Company" or "Nicola") is pleased to announce results from chip samples taken during a due diligence site¹ visit to the Dominion Property. Four chip samples across mineralization exposed in a historical trench comprising vein material and adjacent rock, and one grab sample representative of vein material from both exposed veins were taken (Figure 1 and Map 1). The samples were sent to ALS Metallurgy Laboratory² ("ALS Labs") located in Kamloops, BC and returned the following grades (Table 1):

Table 1: Chip Sample and Vein Representative Grab Sample Results.

Samples A00204491 and A0024489 were taken directly from the footwall and hanging wall portion of the Number 16 Vein outcrop; Samples A00204490 and A00204488 were taken from material adjacent to the hanging wall vein. The sample marked Surface Chip (no tag) was a composite sample representative of the footwall and hanging wall vein material (Figure 1).

In addition to mineralization grades, material is currently undergoing metallurgical test work at ALS Labs. Testing includes creating a sulfide-based gold / silver concentrate via flotation processes similar to the Company's fully permitted flotation mill located near Merritt, BC to calculate gold recovery. The Company will issue a separate news release on concentrate grades and characteristics when analysis is complete.

The Company announced in its September 23, 2020 news release that it had signed a Letter of Intent with High Range Exploration Ltd. ("High Range") that provides Nicola a 75% economic interest in the Dominion Creek Property. Upon satisfactory due diligence and execution of a Definitive Agreement, High Range and Nicola plan to bring the project towards a 10,000-tonne bulk sample permit.

Sample Preparation, Analysis and Quality Assurance/Quality Control

Nicola Mining applies a thorough quality assurance/quality control program at the Project, which is compliant

Kevin Wells, P.Geo, a consulting geologist to the Company, is the independent qualified person as defined by National Instrument 43-101 - Standards of Disclosure for Mineral Projects for the technical disclosure contained in this news release.

Nicola Mining Inc. is a junior mining company listed on the TSX Venture and Frankfurt Exchanges that maintains a 100% owned mill and tailings facility, located near Merritt, British Columbia. The fully permitted mill can process both gold and silver mill feed via gravity and flotation processes. The Company also owns 100% of the New Cragmont Project, a high-grade copper property, and an active gravel pit that is located adjacent to its milling operations.
