

Orford Greatly expands its Property Position in the Underexplored Joutel Area

02.12.2020 | [CNW](#)

TORONTO, Dec. 2, 2020 - [Orford Mining Corp.](#) ("Orford") (TSXV: ORM) is pleased to announce that it has increased its holdings in the underexplored Joutel Region by claim staking the Joutel-Omega property (Figure 1). The 100% Orford owned Joutel-Omega property covers approximately 17,000 hectares of underexplored Archean greenstone belt in Quebec's Abitibi District. Together with the previously announced McClure East and Joutel South Properties, Orford's exploration portfolio covers approximately 21 km². The new property covers the Vanier-Dalet-Priorier Group (VDP) and the Valerennes Volcanic Group (VVG). The latter is part of the Joutel-Raymond volcanic complex that hosts both Agnico-Eagle Mines Ltd.'s (TSX: AEM) foundry mine, Eagle/Telbel, which produced in excess of 1.1 Moz of gold¹ and a number of copper mines that have produced 2.5 Moz of copper, 116Mlbs of zinc and 52 Mlbs of silver² (Figure 1). To the southeast, the VDP hosts the Sleeping Giant mine which has produced 978,000 ounces (3.2 Mt @ 10.48g/t Au³). Information from neighbouring properties is not necessarily indicative of mineralization on Orford Mining's properties. The technical information presented in this release was obtained from historical work reports filed with the Quebec Ministry of Energy and Natural Resources and has not been independently verified by a Qualified Person as defined by NI 43-101.

David Christie, President and CEO of Orford, commented "We believe the new Joutel-Omega property offers Orford a unique opportunity to have a large property position in the heart of the Abitibi. The new ground has seen very little exploration and has a number of gold showings and significant structural deformation that we believe has tremendous untapped potential. Our interest in the potential of this area is highlighted by the recent announcement of the formation of the [Agnico Eagle Mining and Exploration Company / Maple Gold Mines Ltd.](#) (TSXV: MGM) Joint Venture and Agnico Eagle's renewed commitment of exploration resources to the area where little has been done since Agnico Eagle closed its Eagle/Telbel Mine in 1993."

The Joutel-Omega property is hosted in the Valerennes Volcanic Group (VVG) (Part of the Joutel-Raymond group) and the Vanier-Dalet-Priorier Group (VDP), both of which have been metamorphosed to greenschist facies and contain felsic to intermediate volcanic rocks of calc-alkaline affinity[4]. The property hosts several major structural features including the Joutel Fault and several cross-structures and folds that provide opportunities for brittle deformation as well as ductile and shear deformation. These features may concentrate gold mineralization.

Historical work completed on Orford's new Joutel-Omega Claims includes three diamond drill holes that identified anomalies that were never followed-up on. This includes hole D-1 which showed several mineralized intervals of up to 11.6m of 0.6g/t Au including higher grade intervals of 1.46m of 1.7g/t Au and other similar intervals (Table 1). Drilling intervals are down-hole only and are not consistent with historical data. True thicknesses cannot be estimated with available information.

Similar to Orford's McClure East and Joutel South properties, Joutel-Omega has had very limited historical testing and proven geological belts and structures. Orford looks forward to exploring the untapped potential that the Joutel-Omega property adds to that of Orford Mining's emergent Nunavik projects, the Qiqavik gold and West Raglan nickel properties.

Table 1: Summary of gold anomalies in historical drilling on the Joutel-Omega Property. Drilling intervals are down-hole only and are not consistent with historical data. True thicknesses cannot be estimated with available information. The technical information presented in this release was obtained from historical work reports filed with the Quebec Ministry of Energy and Natural Resources and has not been independently verified by a Qualified Person as defined by NI 43-101.

About Orford Mining Corporation

Orford Mining is a gold explorer focused on highly prospective and underexplored areas of Northern Quebec. Orford's primary assets are the Qiqavik and West Raglan projects comprising a land package totaling over 80,000 hectares in the Cape

of Northern Quebec. The Qiqavik Project hosts several new high-grade gold discoveries along a mineralized trend in ex km. The West Raglan project hosts numerous high-grade Raglan-style nickel/copper/platinum group metal discoveries km mineralized trend. Orford also recently acquired three property positions in the Joutel region of the Abitibi district of Quebec, which hosts historical deposits such as the Eagle/Telbel, Joutel Copper, Poirier Copper, and Veza deposits. continually seeks new gold exploration opportunities in North America. Orford's common shares trade on the TSX Vent Exchange under the symbol ORM. This information from neighbouring properties is not necessarily indicative of the min on Orford Mining's properties.

To view further details about the Orford's exploration projects please visit Orford's website, www.orfordmining.com.

Qualified Person

The disclosure of scientific and technical information contained in this news release has been approved by Alger St-Jean, Chief Geoscientist of Orford, a Qualified Person under NI 43-101. The technical information presented in this release w from historical work reports filed with the Quebec Ministry of Energy and Natural Resources and has not been indepen verified by a Qualified Person as defined by NI 43 101.

Cautionary Statement Concerning Forward-Looking Statements

Neither the TSXV nor its Regulation Services Provider (as that term is defined in the policies of the TSXV) accepts resp for the adequacy or accuracy of this release. This news release contains "forward-looking information" including without statements relating to the liquidity and capital resources of Orford and potential of one or more of the Qiqavik, West Ra Joutel area properties. Forward-looking statements involve known and unknown risks, uncertainties and other factors w cause the actual results, performance or achievements of Orford to be materially different from any future results, perfo achievements expressed or implied by the forward-looking statements. Factors that could affect the outcome include, a others: future prices and the supply of metals; the results of drilling; inability to raise the money necessary to incur the e required to retain and advance the properties; environmental liabilities (known and unknown); general business, econo competitive, political and social uncertainties; accidents, labour disputes and other risks of the mining industry; political terrorism, insurrection or war; or delays in obtaining governmental approvals, failure to obtain regulatory or shareholder For a more detailed discussion of such risks and other factors that could cause actual results to differ materially from th expressed or implied by such forward-looking statements, refer to Orford's filings with Canadian securities regulators av SEDAR at www.sedar.com.

Although Orford has attempted to identify important factors that could cause actual actions, events or results to differ m from those described in forward-looking statements, there may be other factors that cause actions, events or results to those anticipated, estimated or intended. Forward-looking statements contained herein are made as of the date of this release and Orford disclaims any obligation to update any forward-looking statements, whether as a result of new inform future events or results or otherwise, except as required by applicable securities laws.

The TSXV has neither approved nor disapproved the contents of this news release.
