

Drill Program Set to Resume at Golden Goliath's Kwai Project, Red Lake, Ontario

28.01.2021 | [Newsfile](#)

Vancouver, January 28, 2021 - [Golden Goliath Resources Ltd.](#) (TSXV: GNG) (OTC Pink: GGTHF) (FSE: GGZ) is about to resume the diamond drilling program on its Kwai property in order to test the strongest IP anomalies on the East Grid as well as many others along the Pakwash Fault, all within the 10 km property covering the Pakwash structure. The drill is now en route to the project and is scheduled to arrive on January 28.

A total of 20 proposed holes have been selected from a list of 40 targets on the East and Central Grids, with the first five targets being the strongest chargeabilities found on the whole property to date. The new access road completed in December will make logistics much easier for this winter's drill program, with all of the holes just 100 to 500 m from this road.

An IP survey on Beauregard Lake is also under way to cover a two km section of the Pakwash Fault that sits up ice from gold grains found in the glacial till on the West Grid, see figure 2. This survey will fill in a large gap in the overall IP coverage, as the rest of the IP survey was done during the summer months. The coverage of this gap is important because airborne Mag and EM surveys show that a large splay fault cuts the main Pakwash break beneath the lake (figures 2 and 4) and that is a prime gold exploration target. Similar splay faults also occur on the East Grid and are included in the 20 selected holes. Those splay faults occur to the east of gold grains found on the East Grid and the ice direction is from the northeast (figure 4).

Drilling of the targets generated by the Beauregard Lake IP survey will be in addition to the 20 planned holes on the East and Central Grids. A survey of the Beauregard Lake sediment geochemistry is also being initiated at this time and this data will also guide the lake drilling.

Whole rock analysis for major elements were completed on the 14 holes drilled on the West Grid and this work has discovered a second zone of mafic basalt volcanics along the southern part of the grid which was not outcropping and therefore was unknown. Komatiitic basalt, iron thoeilite, and magnesium basalts all occur along the Pakwash Fault in a unit both north and south of the shear zone for widths of up to 500 m. This has led to the interpretation that a fold structure follows this section of the Pakwash Fault on the Kwai property. These rocks then become folded northward and cross the BTU property and continue into the Great Bear Dixie property where the Hinge zone and an old Teck gold zone occur in basalts. The importance of this finding is that these basalt types are the host of the main gold mines in the Red Lake Camp and are part of the Uchi sub province.

Diamond drill pads will be placed in advance on as many as 20 targets on the East and Central Grids, linking them to the new road access to the East Grid. The East Grid is also an area that could be a possible source of gold grains in the till. Drilling on the Central Grid south of Beauregard Lake will be included in this phase as access to this area is also gained from the new GNG access road (see photos on Company website under photo gallery).

Cautionary Statements Regarding Forward Looking Information

Certain statements included herein may constitute "forward-looking statements". All statements included in this press release that address future events, conditions or results, including in connection with exploration activity, future acquisitions and any financing, are forward-looking statements. These forward-looking statements can be identified by the use of words such as "may", "must", "plan", "believe", "expect", "estimate", "think", "continue", "should", "will", "could", "intend", "anticipate" or "future" or the negative forms thereof or similar variations. These forward-looking statements are based on certain assumptions and analyses made by management in light of their experiences and their perception of historical trends, current conditions and expected future developments, as well as other factors they believe are appropriate in the circumstances. These statements are subject to risks, uncertainties and assumptions, including those mentioned in the Company's continuous disclosure documents, which can be found under its profile on SEDAR (www.sedar.com). Many of such risks and uncertainties are outside the control of the Company and could cause actual results to differ materially from those expressed or implied by such forward-looking statements. In making such forward-looking statements, management has relied upon a number of material

factors and assumptions, on the basis of currently available information, for which there is no insurance that such information will prove accurate. All forward-looking statements are expressly qualified in their entirety by the cautionary statements set forth above. The Company is under no obligation, and expressly disclaims any intention or obligation, to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as expressly required by applicable law.
