

1844 Resources Announces Filing of NI 43-101 Technical Report for Its Native Copper Project

11.05.2021 | [GlobeNewswire](#)

SASKATOON, May 11, 2021 - 1844 RESOURCES LTD. (TSX-V:EFF) (the "Company" or "1844"), announces further to its News Release dated April 22, 2021, that the Company has filed the National Instrument 43-101 technical report titled "Technical Report, Pertaining to: The Native Copper Project, Gaspé Peninsula, Quebec" dated effective April 15, 2021 prepared by Yvan Bussi?re, P. Eng which will be available under the Company's profile on the Sedar website (www.sedar.com).

The project, which is accessible by forestry roads and is situated on the south portion of the Gaspé Peninsula, was first acquired through a prospector in 2019. Following our initial due diligence on the original 36 claims, the company acquired an additional 120 claims through staking. The project is part of the Mont Alexandre syncline, associated with an important metallotect volcanic horizon portion of the Lake McKay Member, which lies within the greenstone belt present in the Gaspé Peninsula. The property has returned values ranging from 0.15% Cu in drilling to 5.38% Cu. The technical NI 43-101 of the property was commission to determine our exploratory and drilling plan for 2021-22.

Observation of the mineralization on the Native Copper project indicates that it is similar to the native copper orebodies of the Keweenaw Peninsula. In this context, the faults must be seriously investigated as they represent potential pathways for the circulation of the hydrothermal fluids, mainly where they cross porous horizons where native copper can be deposited.

To assess the project's potential, the author recommends a airborne magnetic and electromagnetic survey, a geological reconnaissance survey, regional soil sampling at a 200-m line spacing to complete the coverage of the favourable host rock unit of the project, detailed soil sampling at a 50-m line spacing to cover 11 geochemical anomalies and the mineralized sites already define by previous work, trenching of the soil anomalies and detailed geological mapping, which should lead to the identification of drill targets in addition to the seven drill holes recommended on the soil anomalies already define by Metco and Breakwater more detailed description of the recommended exploration work is provided in the report, along with the associated budget.
