

Mountain Boy Minerals Ltd. Announces Exploration Program for the American Creek Silver-Gold Project

25.05.2021 | [Newsfile](#)

- Field work to commence in June
- Follow-up diamond drill program to commence this summer
- Further testing of new Cu-Au Bench zone to take place

Vancouver, May 25, 2021 - [Mountain Boy Minerals Ltd.](#) (TSXV: MTB) (OTCQB: MBYMF) (FSE: M9U) ("Mountain Boy" or the "Company") announces that field work will soon commence on the American Creek Project and will include a fully funded drill program focused on the Company's namesake historic Mountain Boy silver mine.

The American Creek Project is a 2,600-hectare property located 20 kilometres north of Stewart. The project is road accessible and a high voltage transmission line passes 5 km to the south.

Initial fieldwork, set to commence mid-June, is intended to refine follow-up drill targets around the High-Grade zone at the Mountain Boy silver mine.

Drilling last year demonstrated that the shallow structures intersected in drill holes are base metal rich and likely represent one of several mineralizing pulses in the epithermal system. This season's drilling will target steeper cross structures and localized ore shoots and will be guided by additional mapping. A detailed structural mapping and 3D modelling initiative will take place before an initial phase I drill program of up to 1500 metres commences.

In 1999 and 2000, 51.6 tonnes of material were extracted from the High-Grade vein and sent to the Cominco smelter in Trail, BC. The documented grades of 13.6 tonnes of this material is 18.854 kilograms per tonne silver, 1.1% zinc and 2.5 % lead (Assessment Report 29066). The exceptional grades demonstrate why this is still such a compelling target.

The current program will include follow-up and channel sampling on the Wolfmoon zone. Bedrock sample 71545 was taken two-kilometers to the north-northwest of the Wolfmoon zone and returned 1,488 grams per tonne silver, 1.14% lead, 0.54% zinc and 3.05 grams per tonne gold, demonstrating the potential for considerable strike length to this style of mineralization (see February 24, 2021 news release).

The Bench zone will also be examined. Mapping and channel sampling of this zone will attempt to determine whether it is part of the epithermal mineralization or a separate mineralizing event. Last field season, surface samples returned gold and copper values including sample 71681 at 4.8 grams per tonne gold, 4.5% copper, and 32 grams per tonne silver (see February 24, 2021 news release).

About Mountain Boy Minerals

Mountain Boy has six active projects spanning 604 square kilometres (60,398 hectares) in the prolific Golden Triangle of northern British Columbia.

1. The flagship American Creek project is centered on the historic Mountain Boy silver mine and is just north of the past producing Red Cliff gold and copper mine (in which the Company holds an interest). The American Creek project is road accessible and 20 km from the deep-water port of Stewart.

2. On the BA property, 178 drill holes have outlined a substantial zone of silver-lead-zinc mineralization located 4 km from the highway.
3. Surprise Creek is interpreted to be hosted by the same prospective stratigraphy as the BA property and hosts multiple occurrences of silver, gold and base metals.
4. On the Theia project, work by Mountain Boy and previous explorers has outlined a silver bearing mineralized trend 500 meters long, highlighted by a recent grab sample that returned 39 kg per tonne silver (1,100 ounces per ton).
5. Southmore is located in the midst of some of the largest deposits in the Golden Triangle. It was explored in the 1980s through the early 1990s, and largely overlooked until Mountain Boy consolidated the property and confirmed the presence of multiple occurrences of gold, copper, lead and zinc.
6. The Telegraph project has a similar geological setting to major gold and copper-gold deposits in the Golden Triangle.

Mountain Boy is funded for the coming field season and plans to advance these projects, including drilling on select project(s).

The technical disclosure in this release has been read and approved by Andrew Wilkins, B.Sc., P.Geo., a qualified person as defined in National Instrument 43-101.
