

PGS Completes Coverage of West African Transform Margin with New Côte d'Ivoire Data

26.08.2021 | [Globenewswire Europe](#)

August 26, 2021

The latest PGS MegaSurvey data reveals Tano Basin prospectivity from shelf to deep water and supplements our continuous data coverage from Côte d'Ivoire to Nigeria. This data package from PGS enables regional exploration across the West African Transform Margin.

Phase two of our CDI MegaSurvey data adds 9 897 sq. km of 3D and 24 632 km 2D in the Tano Basin. The CDI MegaSurvey now offers 32 310 sq. km of continuous full-stack data for Côte d'Ivoire.

Cretaceous Potential Revealed in CDI Open Acreage

In partnership with PetroCi and Direction Générale des Hydrocarbures, PGS has completed phase two of the Côte d'Ivoire MegaSurvey, adding 9 897 sq. km of 3D and 24 632 km 2D in the Tano Basin. Data from phases 1 and 2 have been matched, merged, and re-binned onto a common grid, to create a single, continuous 32 310 sq. km volume of full-stack data in the time domain.

The latest Côte d'Ivoire MegaSurvey spans the western extension of the prolific Tano Basin and covers two recently spudded exploration wells "Baleine-1X" (Eni) and "Obunu-1X" (Total). The MegaSurvey is also along-strike to the recent Eni "Eban-1X" nearfield discovery, which is reported to have found light oil in an 80m-thick section of Cenomanian sandstones.

Numerous Upper Cretaceous turbidite channel and fan systems present in the eastern deepwater area are also revealed on the new coverage.

- Webinar | Exploration Screening with PGS MegaSurvey

The basin-wide understanding provided by PGS MegaSurvey seismic data allows reliable regional depositional models to be built both spatially and temporally through geological time, making it easier to identify the best potential targets for future exploration

Exploration Screening on West African Transform Margin

The new MegaSurvey coverage allows the entire West African transform margin to be analyzed in a regional context.

PGS 3D data along the margin covers existing discoveries, farm-in opportunities, and open blocks available for licensing. A special promotional package is available that allows exploration for analogs, identification of new prospects, and detailed play analysis from shelf to deep water, along the entire margin.

Five key regional horizons have been tied to wells and interpreted allowing field-scale geological understanding to be placed into a basin-wide context and open acreage opportunities to be assessed with confidence.

Our CDI MegaSurvey is part of PGS' continuous seismic data coverage across the entire West African

Transform Margin, from Côte d'Ivoire to Nigeria
