

Cyprrium Metals Ltd: Significant Copper Intersections from Nifty West Drilling

02.11.2021 | [ABN Newswire](#)

Perth, Australia - [Cyprrium Metals Ltd](#) (ASX:CYM) is pleased to announce that first assay results from the Nifty West drilling program. The initial batch of results* are from 16 RC holes (for 3,830m) drilled within the existing resource model.

- First assay results received from the Nifty West drilling program targeting lightly tested areas of copper mineralisation below and to the immediate west of the former Nifty open pit.

- Multiple zones of significant copper mineralisation intersected in the keel of the Nifty Syncline below the open pit.

Managing Director Barry Cahill commented:

"The first phase of drilling at Nifty West has clearly demonstrated excellent potential to expand the existing open pit resource up-plunge of the former underground mine within the keel area of the Nifty Syncline. Follow-up drilling is being planned as a priority.

In the meantime, we look forward to reporting further assay results from the Nifty West drilling program once they are received and the first results from our Maroochydore drilling program which is now well advanced."

Discussion of results

Wide intervals of low to medium-grade copper sulphide mineralisation were encountered on the two sections lines (101,480E - Figure 3 and 101,520E- Figure 4*) drilled below the western end of the open pit.

This mineralisation is interpreted associated with the up-plunge extent of the Nifty Syncline keel zone, which has been lightly drilled tested from both surface and underground.

The results from the western extensions of the former Nifty open pit were generally consistent with the low-grade results from the previous wide-spaced holes.

Further drilling will be conducted to the immediate west of this keel zone as a priority, which has the potential to materially grow the existing +0.6 Mt copper resource inventory at Nifty (Figure 5*).
