

Rising Phoenix Royalties Acquires Another Range Resources Marcellus Basin Mineral Acquisition

06.01.2022 | [PR Newswire](#)

[Range Resources Corp.](#), a leading U.S. independent natural gas and NGL producer, is the well-site operator

DALLAS, Jan. 6, 2022 - Rising Phoenix Royalties (RPR) reveals another natural gas royalty acquisition spanning 98 net royalty acres in the Marcellus Shale, Washington County, PA. [Range Resources Corp.](#), (NYSE:RRC), a leading US independent natural gas and NGL producer, is the well-site operator.

"Our clients chose to divest out of their oil and gas royalties due to its volatile nature, increasing regulations, and possible future unfavorable capital gains tax legislation," noted Jace Graham, RPR CEO and Founder. "It made sense for their estate planning to sell and reinvest the proceeds into a more financially stable asset."

For over 25 years RRC has operated in Pennsylvania covering nearly a million net mineral acres, the majority of which comprises stacked pay potential for the Upper Devonian, Utica, and Marcellus shale formations. In addition, with its decade-long commitment to a large-scale water recycling program, RRC became the industry's first company to reuse nearly 100% of its Pennsylvania produced water.

At RPR, the mineral sale evaluation process includes an in-depth reservoir analysis completed by a reputable third party geological engineering firm with expertise in all US Basins.

"We share this data so mineral owners can make an educated decision on what their assets are worth," said Graham. "It's our goal to demystify the process and guide owners step-by-step through our evaluation and acquisition process."

Common situations why RPR clients choose to divest some or all of their royalty assets include estate planning, optimizing tax benefits, funding retirement, immediate financial need, estate liquidation, and investment portfolio diversification.
