

# Core Logging Commenced at Poplar to improve Geological Model And Target High Grade Copper Mineralization

20.01.2022 | [GlobeNewswire](#)

Vancouver, Jan. 20, 2022 - [Universal Copper Ltd.](#) ("Universal Copper" or the "Company") (TSX Venture: UNV) (Frankfurt: 3TA2) is pleased to announce commencement of a targeted drill core logging/re-logging exploration program at Poplar Copper Deposit ("Poplar") led by Vector Geological Solutions Inc ("Vector"). The Poplar is the Company's flagship project, located southwest of Houston, British Columbia.

The focused evaluation campaign was designed by Vector to advance the geological understanding of the deposit and identify additional drill targets. New copper-moly-gold targets will have the potential to increase the grade and tonnage of the existing resource.

Clive Massey, Universal Copper's CEO and President commented, "The technical team at Universal Copper is utilizing the extensive drill core library that the company maintains for the Poplar Deposit. Advancing our technical understanding of the Poplar Deposit through the application of modern, cutting-edge exploration techniques and tools will produce robust diamond drill targets and significantly enhance the potential to increase the size and grade of the resource. Furthermore, a better understanding at Poplar will improve our ability to identify new targets elsewhere on the broader, prospective land position."

The targeted drill core logging/relogging program will improve the 3D lithological, structural, alteration and geochemical framework. The work will be a foundation for drill hole targeting designed to expand the resource and increase the overall grade of the deposit. Exploration tools to generate mineral and geochemical targets include Portable XRF, TerraSpec Halo Spectrometer, and modelling software.

Core from the 2005 drilling programs onward, totaling in excess of 26,000 metres in 67 holes (inclusive of the 2021 program) will form the basis for the targeted drill core logging/re-logging campaign.

The Company continues to receive assays from the Q4 2021 drill program; they will be released upon review and QA/QC verification.

## About Poplar

The 61,566-hectare Poplar Project hosts a current undiluted indicated mineral resource of 152.3 million tonnes grading 0.32 per cent copper, 0.009 per cent molybdenum, 0.09 gram per tonne gold and 2.58 g/t silver and an undiluted inferred mineral resource of 139.3 million tonnes grading 0.29 per cent copper, 0.005 per cent molybdenum, 0.07 g/t gold and 4.95 g/t silver. The mineral resource estimate has a cut-off grade of 0.20% copper. Universal Copper cautions investors mineral resources, which are not mineral reserves, do not have demonstrated economic viability.

Poplar lies in a historic mining region, located 35km from the Huckleberry Mine and 42km from Equity Silver Mine, where low snowfalls will allow year-round work. The road accessible property is bisected by a 138 Kva Hydro electric line and lies 88km from Houston and 400km from the deep-water port at Prince Rupert by rail.

## Qualified Person

The technical content of this New Release has been reviewed and approved by R. Tim Henneberry, P. Geo (BC) a member of the Company's Advisory Board and a Qualified Person under National Instrument 43-101.

## About Universal Copper

[Universal Copper Ltd.](#) is a Canadian-based copper exploration company focused on the acquisition and exploration of copper properties. The Company's management team has many years of experience in exploration, finance, and efficient public company management. Universal's current focus is on advancing the Poplar Copper Project, one of the most advanced pre-production copper projects in British Columbia with a historic 43-101 resource.
