Woods Point Gold Project, Victoria - Regional

Review of data across the Company's strategic 660km² tenement package occurred during the Quarter. The 1.5km long Wallaby-Eldorado-Shakespeare trend has been identified as a high priority exploration target for a 2022 regional exploration program.

Red Mountain silver-zinc VMS and IRGS Project, Alaska

At the Kiwi VMS prospect, rock chip assay results from massive sulphide float returned up to 16% copper, 8% zinc and 316g/t silver. A fixed loop electromagnetics geophysical survey has identified a strong (conductivity thickness of 40 siemens) and discrete 400 metre long conductor proximal to the high-grade copper rock chip float. The source of the conductivity response is potentially a copper-rich massive sulphide deposit that is drill-ready.

Thomson Resources progressed the EIS and DFS under the Earn-In joint venture with the Company.
