

# Metals Creek Resources Corp. Drill Hole DL21-022 Returns 2.26 g/t Gold over 22.04 Meters

01.03.2022 | [Newsfile](#)

## Including 3.45 g/t Gold over 10.13 Meters at Dona Lake

Thunder Bay Ontario, March 1, 2022 - [Metals Creek Resources Corp.](#) (the "Company" or Metals Creek, TSXV: MEK, OTCQB: MCREF, FRA:M1C1) is pleased to announce diamond drill results for drill holes DL21-022 and DL22-023 from the phase III diamond drill program at the Dona Lake Gold project (See News Release November 08, 2021).

Drill hole DL21-022 intersected the Main Zone stratigraphy at approximately 518 meters(m) below surface and 68m below the lowermost mine working (455 Level) returning a core length intercept of 3.45 grammes per ton (g/t) gold (Au) over 10.13m (557.00 - 567.13m). This was a part of a broader zone of mineralization of 2.26 g/t Au over 22.04m (549.11 - 571.15m). (See Table 1 Significant Results). Mineralization is hosted within silicate-sulfide iron formation and characterized by stringer to disseminated pyrrhotite ranging from 1 to 15% with local pyrite. Alteration consists of moderate to strong hornblende, garnet and grunerite. Primary banding within the iron formation has become more diffuse with an increase in alteration intensity. Visible Gold (VG) was noted in this intercept.

Drill hole DL22-023 intersected the Main Zone stratigraphy at approximately 510m below surface and returned a core length intercept of 4.47 grammes per ton (g/t) gold (Au) over 1.83 meters(m) (586.01-587.84m). Mineralization is hosted within silicate-sulfide iron formation with disseminated to stringer pyrrhotite ranging from 1 to 15% and trace disseminated pyrite. VG was noted in this intercept. DL22-023 was the most northerly hole drilled by the Company to date as shown on the attached longsection in an attempt to further define the northern limit of gold mineralization within Main Zone.

Drilling to date has successfully extended high grade gold mineralization 151m below the lower most mine working, or 596m below surface along with further defining high-grade mineralization 50m south of the Dona Lake mine workings.

Drilling is ongoing and will continue to target the down plunge extension of the mine stratigraphy as well as test peripheral targets which include the North West Zone and the East Iron Formation.

## Table 1 - Significant Results

Drill intercepts are core lengths and are believed to be 70-80% true thickness.

Drill results will be released once they are received and compiled.

The Dona Lake Gold Project was optioned from Newmont Corporation (previously Newmont Goldcorp - see news release dated 13 June 2019) and is located in the Pickle Lake Greenstone Belt which is host to several historic mines including the Dona Lake mine, the Central Patricia mine and the Pickle Crow mine. Dona Lake is accessible by an all-weather road southeast from the Town of Pickle Lake. The Project consists of 32 patented and leased mining claims and 35 map staked claims totaling approximately 1,122 hectares and covers the past producing Dona Lake Mine.

Michael MacIsaac, P.Geo and VP Exploration for the Corporation and a qualified person as defined in National Instrument 43-101, is responsible for this release, and supervised the preparation of the information forming the basis for this release.

All split core samples were sent to Activation Laboratories. The precious metals were analyzed utilizing a standard fire assay with an atomic absorption finish. As part of the Corporations QAQC protocol, approximately 10% of the samples submitted for assay were also sent for check assays. Standards and blanks were inserted randomly into the sample shipments as part of the sampling protocol. Samples with fire assay results above 1.0 g/t gold are re-analyzed using a gravimetric finish and samples with fire assay results above 5.0 g/t gold or samples showing visible gold are analyzed using the pulp metallic method.

About Metals Creek Resources Corp.

Metals Creek Resources Corp. is a junior exploration Company incorporated under the laws of the Province of Ontario, is a reporting issuer in Alberta, British Columbia and Ontario, and has its common shares listed for trading on the Exchange under the symbol "MEK". Metals Creek has earned a 50% interest in the Ogden Gold Property from Newmont Corp., including the former Naybob Gold mine, located 6 km south of Timmins, Ontario and has an 8 km strike length of the prolific Porcupine-Destor Fault (P-DF). In addition, Metals Creek has signed an agreement with Newmont Corp., where Metals Creek can earn a 100% interest in the past producing Dona Lake Gold Project in the Pickle Lake Mining District of Ontario.

Metals Creek also has multiple quality projects available for option in Ontario and Newfoundland which can be viewed on the Corporation's website. Parties interested in seeking more information about properties available for option can contact the Corporation at the number below.

Additional information concerning the Corporation is contained in documents filed by the Corporation with securities regulators, available under its profile at [www.sedar.com](http://www.sedar.com).

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
