

# Classic Minerals Limited: Kat Gap Market Update

04.04.2022 | [ABN Newswire](#)

Perth, Australia - [Classic Minerals Ltd.](#) (ASX:CLZ) is pleased to announce the Department of Water and Environment Regulation (DWER) has given its approval to construct a well for the supply of water to be used in the processing facility.

The approved area is only about a kilometre away from the facility (see Figure 1\*). Dean Goodwin is extremely confident, that given his experience in this area, that there will be enough water for Classic's requirements. The development of the bore field will be done in stages with one bore to be completed, tested and water pumped to the tanks; before commencing on a second one, if required. In this manner Classic will be able to manage and draw only the approved amount of water, as required by the processing plant. Classic's Chairman, John Lester, has instructed the Company to be cognisant of the environment in all the mining activities and be responsible managers of all natural resources.

The processing facility, which is about 7 Km away from the mining area, has been cleared and the shed and process water tanks erected. Figures 1 and 2\* show an aerial view and site plan of the Classic Minerals processing facility

Dean Goodwin said: "This approval of the water bore provides us with more confidence and certainty of achieving mining success in the near term. I've spent plenty of time in the Forrestania area looking and finding water for previous operators, so I've got a pretty good idea where to look.

Seeing the shed and the water tanks on site is really pleasing too. It's really starting to look like a mining operation now. All we need to do now is drill and find water. Once we have done that we will be able to run a pipe from the well to the tanks and fill them. Great progress!"
