

Genius Metals Launches Summer Exploration Campaign on Sakami

22.06.2022 | [CNW](#)

MONTREAL, June 22, 2022 - [Genius Metals Inc.](#) (TSXV: GENI) ("Genius Metals" or the "Company") is pleased to announce a new summer exploration program on the Sakami property located in James-Bay Territory, Quebec and provides an update on its past winter exploration program.

Summer 2022 Exploration Program

The company is currently implementing Phase I of its summer exploration program on the Sakami property consisting of detailed investigation on the newly acquired claims in the basement rocks of the Archean Langelier Complex. A crew composed of geologists and technicians were mobilised for a three-week period. The objective of this first phase of exploration is to expand and unearth gold mineralization through geological and structural mapping, rock and channel sampling and collection of till material. The latter survey will be realized on the volcanosedimentary assemblages south of the Langelier Complex.

The second phase of exploration involves a 2,000 m to 3,000 m exploratory drilling program which will focus on the metavolcanic assemblages located around the GoldenEye prospect but will also investigate other targets provided by the results of the first phase of exploration.

Update on the 2022 Winter Exploration Program

The Company achieved its objectives during the 2022 winter by completing an IP survey on a newly implemented 4 km grid west of the GoldenEye prospect and conducting exploration drilling on the Trans-Taiga showing. The IP survey defined a 3.6 km long NE/SW-oriented high chargeability corridor extending the previous anomalies observed at GoldenEye. Exploration drilling completed in 2021 at the SW limit of the chargeability survey has already demonstrated the gold potential of the Golden Eye eastern zone with intersections of 1.45 g/t Au over 6.0 m and 2.53 g/t Au over 1.50 m (accompanying surface grab samples (0.64 to 2.55 g/t Au) and channel samples; the latter yielding 1.02 g/t Au over 4.1 m and 0.67 g/t Au over 2.00 m (see press releases dated November 10, 2021 and November 3, 2020).

In parallel, the drilling realized during winter on the Trans-Taiga showing could not replicate the gold values obtained at surface through channel sampling.
