

Western Magnesium Announces Continued Success in the Production of Magnesium Metal

29.06.2022 | [The Newswire](#)

Inspections Solidify Further Operations Metal output to increase Third-party metal evaluation has begun

WASHINGTON, June 29, 2022 - [Western Magnesium Corp.](#) (TSXV:WMG.V); (Frankfurt-3WM); (OTC:MLYF) ("Western Magnesium" or the "Company") is pleased to report the production of magnesium metal at its commercial pilot plant, which was announced earlier this month, has been an overwhelming success. An inspection by the Company's technical team and third-party trades has indicated that all systems have proven that the Company can continue with further production as it enters a secondary stage of increasing metal output and subsequent validation of the metal produced.

The Company is presently in the calibration and optimization phase which will continue until satisfactory operating parameters are defined. This phase will be used to validate the industrial process for commercialization and is the final stage in the research and development of Western Magnesium's new process.

Executive Chairman, Ed Lee, states, "Our technical team has proven the value of being cautious in implementing this innovative technology to produce magnesium metal and I look forward to exploring the full range of capabilities the commercialized pilot plant has to offer."

Chief Technology Officer, Paul Sauve states, "With any new disruptive technology, it is paramount that we follow a thorough and cohesive commissioning and optimization plan to ensure the equipment is not overstressed in the initial runs and that any deficiencies are identified and corrected prior to the next phase." Sauve added that the technical team's diligent efforts continue to ensure that all operating systems are functioning as designed.

Western Magnesium will use this revolutionary new production process to once more produce magnesium metal in the United States. Magnesium metal is one of fifty minerals designated as "critical" by the Department of Interior and a necessary component in the production of aluminum and titanium used in a wide range of products in industries including automotive, aerospace, and the Department of Defense as well as eco-friendly tech companies.

Each output of metal at the Company's pilot plant is now being tested and will undergo third-party evaluation over the next several weeks. We look forward to sharing more exciting news about production capabilities and the third-party assessment.

About Western Magnesium

Western Magnesium's goal is to be a low-cost producer of green, primary magnesium metal, a strategic commodity prized for its strength and light weight. Unlike outdated and costly production processes, Western Magnesium looks to use a continuous silicothermic process to produce magnesium, which significantly reduces labor and energy costs relative to current methods and processes, while being environmentally friendly.
