

Kiplin Metals Inc. Permitting Exploration Program on Cluff Lake Athabasca, Saskatchewan

30.06.2022 | [The Newswire](#)

[Kiplin Metals Inc.](#) (TSXV:KIP) (the "Company" or "Kiplin") announces that the Company has applied for the requisite exploration permits for its Summer geophysical program at the Cluff Lake Road (CLR) Uranium Project in northwestern Saskatchewan. Approval for the proposed IP (Induced Polarization) program is expected in the near term. Data from the survey will be integrated with legacy datasets to develop targets for diamond drilling.

The survey is to consist of up to 40-line kilometers, in a roughly east west direction, and will be integrated with data from previous surveys. The purpose of the survey is to define drill targets which are prioritized by radon gas soil anomalies, identified within interpreted faults. The Company is applying for the requisite permits and expects to be drilling within the next 60 days.

The Company has engaged Grander Exploration to manage the program. The Company will provide updates on the timing of its work program as they become available.

Dr. Peter Born, P.Geo., is the designated qualified person as defined by National Instrument 43-101 and is responsible for, and has approved, the technical information contained in this release.

About Kiplin Metals Inc.

[Kiplin Metals Inc.](#) is a mineral exploration company. We create value for our shareholders by identifying and developing highly prospective mineral exploration opportunities. Our strategy is to advance our projects from discovery all the way to production. This vertically integrated strategy allows Kiplin Metals to achieve exceptional shareholder value through the entire life-cycle of the mining process.

Cluff Lake Road Uranium Project. Kiplin Metals has the right to earn a one-hundred percent interest in the Cluff Lake Road Uranium Project (the "CLR Project"). The CLR Project covers ~531ha in the southwestern Athabasca Basin in northern Saskatchewan, where several new discoveries, including the Arrow and Tripe R Uranium deposits have been made. The CLR Project is 5km east of the Cluff Lake Road (Hwy 955), which leads to the historic Cluff Lake Mine, which historically produced approximately 62,000,000lbs of yellowcake uranium.

Exxeter Gold Project covers an area of 715ha located in Val d'Or Quebec, one of the premier gold camps in the world which produced over 113.4M oz Au by the end of 2019. The project covers 3.8km of the Cadillac Tectonic zone, which is the principal geologic structure responsible for cold mineralization in the Val d'Or.
