2-2	0.226	0.266	~3,000

The recent sample collection and scintillometer survey was done using a GR-110G portable gamma ray scintillometer, was completed on August 21, 2022, by Terrence Osier, P.Geol., Vice President Exploration for Strathmore.

All samples are from the outcrop where 93 tons of ore at 0.24% U₃O₈ was previously mined in the 1950-60s. The mineralization is contained within a brecciated zone lying at the contact between the limestone and the overlying sandstone. The 7- to 10-foot-thick zone of breccia consists of voids filled with silicious materials containing complex uranium minerals.

Strathmore has contracted MWH Geo-Surveys of Reno, Nevada to complete a geophysical survey on the Night Owl Property. The study will include a radiometric and magnetic survey utilizing a drone and a ground-based gravity survey. The survey is slated to begin in early October.
