

EMP Metals Corp. Commences Re-entry Of Second Well At Mansur For Lithium Testing

31.10.2022 | [CNW](#)

VANCOUVER, Oct. 31, 2022 - [EMP Metals Corp.](#) (CSE: EMPS) (OTC: EMPPF) ("EMP" or the "Company") is pleased to announce Hub City Lithium Corp. ("HCL"), a subsidiary company to EMP, has now commenced the re-entry of wellbore 101/14-36-008-13 W2M (the "Second Test Well") to test the inflow potential and lithium concentrations in the Duperow zone. The Second Test Well is located in the Mansur Permit Area of southeast Saskatchewan, approximately half a mile from the Company's first test well, 11/11-02-009-13W2/0, which confirmed lithium concentrations of up to 96.3 mg/l (see press release dated February 2, 2022).

Rob Gamley, CEO of EMP, commented, "We are pleased to commence this second re-entry at Mansur and believe it will be a key catalyst for EMP Metals and the expansion of our prospect. This operation will complement our results from our first re-entry, and we are optimistic this step-out re-entry will allow us the option to consider a Preliminary Economic Assessment."

The Mansur Permit Area has existing infrastructure with an ample amount of oil wellbores drilled through the target formation. This allows for potential cost savings on future development and allows the Company to map and target certain lands with lithium potential. This existing infrastructure is expected to lower the ultimate cost of early-stage development of the resource.

HCL licenses now collectively cover an area extending 40 miles north and 40 miles east of the City of Weyburn. The existing oil and gas infrastructure within the area includes over a hundred oil wells drilled through the target formation that can be used for geological mapping, future lithium testing, and development. In addition to the existing oil field infrastructure and labour pool, the economics of the project area are enhanced by the presence of existing infrastructure, including but not limited to: paved highways, rail lines, existing three phase electrical supply, and access to natural gas.

Lithium Brine Properties Joint Venture

The lithium brine properties consist of 37 permits totaling 212,633 acres (86,050 hectares) of Subsurface Crown Mineral Dispositions in the Williston basin of Southern Saskatchewan. Brine sampling of a vertical wellbore located on one of the properties returned lithium concentrations in the Duperow formation up to 96.3 mg/l.

EMP holds 75% of the joint venture with [ROK Resources Inc.](#) (ROK.V) holding the balance.

Forward-Looking Statements

Information set forth in this news release contains forward-looking statements that are based on assumptions as of the date of this news release. These statements reflect management's current estimates, beliefs, intentions and expectations. They are not guarantees of future performance. EMP Metals cautions that all

forward-looking statements are inherently uncertain, and that actual performance may be affected by a number of material factors, many of which are beyond EMP Metals' control. Such factors include, among other things: risks and uncertainties relating to EMP Metals' limited operating history, ability to obtain sufficient financing to carry out its exploration and development objectives on its mineral properties, obtaining the necessary permits to carry out its activities and the need to comply with environmental and governmental regulations. Accordingly, actual and future events, conditions and results may differ materially from the estimates, beliefs, intentions and expectations expressed or implied in the forward-looking information. Except as required under applicable securities legislation, EMP Metals undertakes no obligation to publicly update or revise forward-looking information.

Neither the Canadian Securities Exchange ("CSE") nor its Regulation Services Provider (as that term is defined in the policies of the CSE) accepts responsibility for the adequacy or accuracy of this news release.
