

Lithium South Provides Further Excellent Lithium Results

13.12.2022 | [CNW](#)

VANCOUVER, Dec. 13, 2022 - [Lithium South Development Corp.](#) (the "Company") (TSX-V: LIS) (OTCQB: LISMF) (Frankfurt: LIT) (OGPQ) is pleased to provide results from the ongoing drill campaign at the Hombre Muerto North Lithium Project (HMN) in Salta Province, Argentina. The resource expansion drill program is comprised of four core holes (Holes AS01, AS02, AS04) located north to south, along a channelized extension off the main salar, and three core holes (Holes AS05, AS06, AS07) along the west side of the channel (see enclosed drill map). Two drill rigs are operating on site.

The western boundary of the salar extension has now been expanded based on current results from Holes AS05 and AS06. Both holes have encountered significant lithium brine (grade and thickness). Drilling results indicates a wider salar channel than the previous concept.

Hole AS05, located approximately 800 meters west of hole AS03, has been completed to a depth of 260 meters, with a core length of approximately 185 meters. Eight packer samples have been acquired. Assay work is being performed at Alex Stewart Laboratories of Mendoza, Argentina, on samples acquired under the supervision of Dr. Mark King, a Qualified Person under Instrument 43-101. The Company is reporting results from three samples received so far from Hole AS05:

1. Sample HMN 139 located at the top of the hole at 35 meters, and within an alluvial fan with freshwater influence, returned 725 milligrams per liter lithium (mg/L Li).
2. Sample HMN 140 was taken at 52 meters depth and returned 725 mg/l Li.
3. Sample HMN 141 was taken at 66 meters depth and returned 701 mg/l Li.

Hole AS06 located approximately 800 meters west of hole AS02 is encountering similar geology to hole AS05. The hole is currently at 170 meters and will be continued down to basement.

Hole AS02 located in the center of the salar channel, is now at 240 meters depth. Borehole logging indicates predominantly medium-grained sand. To avoid issues with collapse of the sandy materials, sampling will be conducted at the conclusion of the hole.

Site preparation work is underway to locate Hole AS07 at the southwest.

Company President and Chief Executive Officer Adrian F. C. Hobkirk is quoted, "The ongoing exploration is returning excellent results. Holes located to the west of the claim area are delineating the Alba Sabrina salar channel to be wider than expected, which could positively impact the expansion of the total resource at the Hombre Muerto North Lithium Project."

About Lithium South

The HMN Li Project is at an advanced stage of evaluation, with a Preliminary Economic Assessment completed in April 2022. Lithium South is the 100% owner of the HMN Li Project and expects to expand the known resource with its current drill campaign. Preliminary results support this expectation. Additional project work including permitting, environmental studies and production work is ongoing.

The Hombre Muerto North Lithium Project is adjacent to a US\$4 billion lithium mine under development by the Korean corporation POSCO, which acquired their holdings from Galaxy Resources Ltd. for US\$280 million. Livent Corporation is producing lithium to the south of the Hombre Muerto North Lithium Project and has actively operated there for over twenty-five years.

The technical and scientific information in this press release was reviewed by Dr. Mark King, a Qualified Person under Instrument 43-101. Dr. King participated in the preparation of this news release.
