About Future Minerals Forum

Future Minerals Forum 2023 will once again bring together governments, industry stakeholders and investors from around the world to share and discuss the most effective strategies to expedite mineral production in countries of the Middle East, Africa and Central Asia to address the expected mismatch between the world's pledges to reach net zero emissions and the availability of minerals essential to move us towards a more sustainable energy system.

The inaugural Forum in 2022 brought together over 3,500 participants from +100 countries to hear from more than 130 speakers at an event with a global reach.

About Ivanhoe Electric

Ivanhoe Electric is an American technology and mineral exploration company that is re-inventing mining for the electrification of everything by combining advanced mineral exploration technologies, renewable energy storage solutions and electric metals projects predominantly located in the United States. Ivanhoe Electric uses its Typhoon™ transmitter, an accurate and powerful geophysical survey system, together with advanced data analytics provided by its subsidiary, Computational Geosciences, to accelerate and de-risk the mineral exploration process as well as to potentially discover deposits of critical metals that may otherwise be undetectable by traditional exploration technologies. Through its controlling interest in VRB Energy, Ivanhoe Electric also develops and manufactures advanced grid-scale vanadium redox battery storage systems. Finally, through advancing its portfolio of electric metals projects located primarily in the United States, headlined by the Santa Cruz Copper Project in Arizona and the Tintic Copper-Gold Project in Utah, as well as projects in Montana, Oregon and North Carolina, Ivanhoe Electric is also well positioned to support American supply chain independence by delivering the critical metals necessary for electrification of the economy.
