About the Standby Mine Gold Target

All geologic, geophysical and drill results to date suggest a Homestake ledge-type target exists at Standby and is potentially of large scale. Mineral Mountain's goal is to extend the Standby Mine gold mineralization down-plunge through systematic step-out drilling along strike and down-plunge in the Upper Tail to discover an Ore Centroid at depth.

MMV's two previous core drilling campaigns between 2018 and 2020 extended known gold mineralization from the bottom of the historic Standby Mine workings from 130 meters below surface to a total plunge length of 850 meters.

Jeff Hrcir, the Company's chief geologist commented "Confirming the existence of an Ore Centroid at Standby would be a game-changing discovery for Mineral Mountain Resources and set the stage for future resource delineation drilling."

On Behalf of the Board of Directors,

[Mineral Mountain Resources Ltd.](#)

"Nelson W. Baker", President and CEO
