

# New Found Intercepts 16.1 g/t Au Over 5.30m at Lotto North; Intercepts Gold Mineralization on West Side of Appleton Fault At “Zone 36”

10.01.2023 | [Business Wire](#)

New Found Gold Corp. ("New Found" or the "Company") (TSX-V: NFG, NYSE-A: NFGC) is pleased to announce the results from forty-eight diamond drill holes that were completed as part of an ongoing systematic and targeted drill program exploring the highly prospective segment of the Appleton Fault Zone ("AFZ") from Dome to Lotto North. New Found's 100% owned Queensway project comprises an approximately 1,650km<sup>2</sup> area, accessible via the Trans-Canada Highway approximately 15km west of Gander, Newfoundland and Labrador.

Lotto, Lotto North, and Zone 36 Highlights:

Hole No.	From (m)	To (m)	Interval (m) <sup>1</sup>	Au (g/t)	Zone
NFGC-22-646	71.80	80.30	8.50	4.72	Lotto N
Including	71.80	72.55	0.75	38.50	
NFGC-22-753	204.35	207.65	3.30	11.38	Lotto Main
Including	204.35	205.15	0.80	45.40	
NFGC-22-758	155.65	158.60	2.95	14.58	Lotto N
Including	157.85	158.60	0.75	53.70	
NFGC-22-788	120.70	126.00	5.30	16.12	Lotto N
Including	122.00	123.55	1.55	49.63	
NFGC-22-818	50.45	52.75	2.30	11.05	Lotto N
Including	52.40	52.75	0.35	72.10	
NFGC-22-816	271.70	281.20	9.50	3.63	Zone 36
Including	277.30	277.80	0.50	17.15	
NFGC-22-895	174.65	179.20	4.55	7.26	Lotto N
Including	178.60	179.20	0.60	34.09	
And	193.25	195.85	2.60	9.49	
Including	193.25	193.90	0.65	37.97	

Table 1: Lotto, Lotto North and Zone 36 Drilling Highlights

<sup>1</sup>Note that the host structures are interpreted to be steeply dipping and true widths are unknown at this time for Lotto North and Zone 36. Lotto Main host structure is interpreted to be steeply dipping and true widths are generally estimated to be 70% to 90% of reported intervals. Infill veining in secondary structures with multiple orientations crosscutting the primary host structures are commonly observed in drill core which could result in additional uncertainty in true width. Composite intervals reported carry a minimum weighted average of 1 g/t Au diluted over a minimum core length of 2m with a maximum of 2m consecutive dilution. Included high-grade intercepts are reported as any consecutive interval with grades greater than 10 g/t Au. Grades have not been capped in the averaging and intervals are reported as drill thickness.

- Targeted drilling at the new Lotto North discovery (see November 2, 2022 release) has intersected multiple high-grade gold intervals including 16.12 g/t Au over 5.30m in NFGC-22-788, 14.58 g/t Au over 2.95m in NFGC-22-758, 11.05 g/t Au over 2.30m in NFGC-22-818, 7.26 g/t Au over 4.55m and 9.49 g/t Au over 2.60m in NFGC-22-895 and 4.72 g/t Au over 8.50m in NFGC-22-646 (Figures 1-4).
- At Lotto North, gold mineralization is hosted within a series of AFZ-typical epizonal-style veins contained within a north-south striking brittle fault zone immediately north of the Lotto prospect. Gold mineralization contained within this new structure has been traced over a strike length of 340m and to a vertical depth of 180m; it remains open in all directions. When combined with the Lotto Main Zone, these high-grade gold-bearing structures have been drill-defined over a total strike length of 630m.
- The Company intersected broad gold mineralization west of the AFZ and in close proximity to the Zone 36 prospect during systematic drilling stepping north of Lotto North. In light of the recent discovery of high-grade and low-grade gold mineralization at Keats West, this mineralization grading 3.63 g/t Au over 9.50m in NFGC-22-816 represents an important new drill target currently being tested. It is also the northernmost intercept to date along the Keats-Golden Joint-Lotto segment of the AFZ and expands the strike length of this high-grade segment of the AFZ to 3.4km starting from the south end of Keats.

Melissa Render, VP Exploration for New Found stated: "2022 was an excellent year for exploration at Queensway, providing several exciting leads for follow-up in the New Year. We are encouraged by the results that Lotto North continues to deliver, and we are thrilled to have again identified gold west of the AFZ at Zone 36, a full 2km north of Keats West. We have already mobilized drills into this region for aggressive follow-up on the gold mineralization that has now been identified on both sides of the AFZ this far north."

#### Drillhole Details

##### Lotto And Lotto North Results:

Table 3: Details of drill holes reported in this press release

### Queensway 500,000m Drill Program Update

The Company is currently undertaking a 500,000m drill program at Queensway. Approximately 52,000m of core is currently pending assay results.

### Sampling, Sub-sampling, and Laboratory

True widths of the intercepts reported in this press release have yet to be determined and further exploration is required. Infill veining in secondary structures with multiple orientations crosscutting the primary host structures are commonly observed in drill core which could result in additional variability in true width. Assays are uncut, and composite intervals are calculated using a minimum weighted average of 1 g/t Au diluted over a minimum core length of 2m with a maximum of 2m consecutive dilution. Included high-grade intercepts are reported as any consecutive interval with grades greater than 10 g/t Au.

All drilling recovers HQ core. Drill core is split in half using a diamond saw or a hydraulic splitter for rare intersections with incompetent core.

A geologist examines the drill core and marks out the intervals to be sampled and the cutting line. Sample lengths are mostly 1.0 meter and adjusted to respect lithological and/or mineralogical contacts and isolate narrow (<1.0m) veins or other structures that may yield higher grades.

Technicians saw the core along the defined cutting line. One-half of the core is kept as a witness sample and the other half is submitted for analysis. Individual sample bags are sealed and placed into totes, sealed and marked with the contents.

NFG submits samples for gold determination by fire assay to ALS Canada Ltd. ("ALS") and by photon assay to MSALABS ("MSA") since June 2022. ALS and MSA operate under a commercial contract with New Found.

Drill core samples are shipped to ALS for sample preparation in Sudbury, Ontario, Thunder Bay, Ontario, or Moncton, New Brunswick. ALS is an ISO-17025 accredited laboratory for the fire assay method.

Drill core samples are also submitted to MSA in Val-d'Or, Quebec. MSA operates numerous laboratories worldwide and maintains ISO-17025 accreditation for many metal determination methods. Accreditation of the photon assay method at the MSA Val D'Or laboratory is in progress.

At ALS, the entire sample is crushed to approximately 70% passing 2mm. A 3,000-g split is pulverized. "Routine" samples do not have visible gold (VG) identified and are not within a mineralized zone. Routine samples are assayed for gold by 30-g fire assay with an inductively-couple plasma spectrometry (ICP) finish.

If the initial 30-g fire assay gold result is over 1 g/t, the remainder of the 3,000-g split is screened at 106 microns for screened metallics assay. For the screened metallics assay, the entire coarse fraction (sized greater than 106 microns) is fire assayed and two splits of the fine fraction (sized less than 106 microns) are fire assayed. The three assays are combined on a weight-averaged basis. Samples that have VG identified or fall within a mineralized interval are automatically submitted for screened metallic assay for gold.

At MSA, the entire sample is crushed to approximately 70% passing 2mm. For "routine" samples that do not have VG identified and are not within a mineralized zone, the samples are riffle split to fill two 450g jars for photon assay. The assays reported from both jars are combined on a weight-averaged basis. If one of the jars assays greater than 1 g/t, the remaining crushed material is weighed into multiple jars and are submitted for photon assay.

For samples that have VG identified or are within a mineralized zone, the entire crushed sample is weighed into multiple jars and are submitted for photon assay. The assays from all jars are combined on a weight-averaged basis.

All samples prepared at ALS or MSA are also analyzed for a multi-element ICP package (ALS method code ME-ICP61) at ALS Vancouver.

Drill program design, Quality Assurance/Quality Control and interpretation of results are performed by qualified persons employing a rigorous Quality Assurance/Quality Control program consistent with industry best practices. Standards and blanks account for a minimum of 10% of the samples in addition to the laboratory's internal quality assurance programs.

Quality Control data are evaluated on receipt from the laboratories for failures. Appropriate action is taken if assay results for standards and blanks fall outside allowed tolerances. All results stated have passed New Found's quality control protocols.

New Found's quality control program also includes submission of the second half of the core for approximately 5% of the drilled intervals. In addition, approximately 1% of sample pulps for mineralized samples are submitted for re-analysis to a second ISO-accredited laboratory for check assays.

The Company does not recognize any factors of drilling, sampling or recovery that could materially affect the accuracy or reliability of the assay data disclosed.

The assay data disclosed in this news release have been verified by the Company's Qualified Person against the original assay certificates.

The Company notes that it has not completed any economic evaluations of its Queensway Project and that the Queensway Project does not have any resources or reserves.

#### Qualified Person

The scientific and technical information disclosed in this press release was reviewed and approved by Greg Matheson, P. Geo., Chief Operating Officer, and a Qualified Person as defined under National Instrument 43-101. Mr. Matheson consents to the publication of this press release dated January 10, 2023, by New Found. Mr. Matheson certifies that this press release fairly and accurately represents the scientific and technical information that forms the basis for this press release.

#### At-The-Market Quarterly Update

The Company is pleased to provide a quarterly update with respect to the Company's at-the-market equity offering program (the "ATM") implemented on August 26, 2022, pursuant to an equity distribution agreement (the "Equity Distribution Agreement") with BMO Nesbitt Burns Inc., Paradigm Capital Inc. (together, the "Canadian Agents") and BMO Capital Markets Corp. (the "U.S. Agent" and, together with the Canadian

Agents, the "Agents").

From the commencement of the ATM to December 31, 2022, the Company issued an aggregate of 500,229 common shares in the capital of the Company (the "ATM Shares"), through the facilities of the TSX Venture Exchange (the "TSXV") and NYSE American, at an average price per ATM Share of C\$5.097. From October 1, 2022, to December 31, 2022, the Company issued 412,829 ATM Shares for aggregate gross proceeds of C\$2,109,276.90. Pursuant to the Equity Distribution Agreement, a cash commission of C\$49,573.48 was paid to the Agents in connection with the issuance of the ATM Shares, resulting in aggregate net proceeds of C\$2,059,703.42.

This press release shall not constitute an offer to sell or a solicitation of an offer to buy, nor will there be any sale of these securities in any state or jurisdiction in which such an offer, solicitation or sale would be unlawful prior to registration or qualification under the securities laws of any such state or jurisdiction.

About New Found Gold Corp.

New Found holds a 100% interest in the Queensway Project, located 15km west of Gander, Newfoundland and Labrador, and just 18km from Gander International Airport. The project is intersected by the Trans-Canada Highway and has logging roads crosscutting the project, high voltage electric power lines running through the project area, and easy access to a highly skilled workforce. The Company is currently undertaking a 500,000m drill program at Queensway and is well funded for this program with cash and marketable securities of approximately \$90-million as of January 2023.

Please see the Company's website at [www.newfoundgold.ca](http://www.newfoundgold.ca) and the Company's SEDAR profile at [www.sedar.com](http://www.sedar.com).

#### Acknowledgements

New Found acknowledges the financial support of the Junior Exploration Assistance Program, Department of Natural Resources, Government of Newfoundland and Labrador.

#### Contact

To contact the Company, please visit the Company's website, [www.newfoundgold.ca](http://www.newfoundgold.ca) and make your request through our investor inquiry form. Our management has a pledge to be in touch with any investor inquiries within 24 hours.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

#### Forward-Looking Statement Cautions

This press release contains certain "forward-looking statements" within the meaning of Canadian securities legislation, relating to exploration, drilling and mineralization on the Company's Queensway gold project in Newfoundland and Labrador; assay results; the interpretation of drilling and assay results, the results of the drilling program, mineralization and the discovery of zones of high-grade gold mineralization; plans for future exploration and drilling and the timing of same; the merits of the Queensway project; future press releases by the Company; and funding of the drilling program. Although the Company believes that such statements are reasonable, it can give no assurance that such expectations will prove to be correct. Forward-looking statements are statements that are not historical facts; they are generally, but not always, identified by the words "expects," "plans," "anticipates," "believes," "interpreted," "intends," "estimates," "projects," "aims," "suggests," "often," "target," "future," "likely," "pending," "potential," "goal," "objective," "prospective," "possibly," "preliminary," and similar expressions, or that events or conditions "will," "would," "may," "can," "could" or "should" occur, or are those statements, which, by their nature, refer to future events. The Company cautions that forward-looking statements are based on the beliefs, estimates and opinions of the Company's management on the date the statements are made, and they involve a number of risks and

uncertainties. Consequently, there can be no assurances that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Except to the extent required by applicable securities laws and the policies of the TSX Venture Exchange, the Company undertakes no obligation to update these forward-looking statements if management's beliefs, estimates or opinions, or other factors, should change. Factors that could cause future results to differ materially from those anticipated in these forward-looking statements include risks associated with possible accidents and other risks associated with mineral exploration operations, the risk that the Company will encounter unanticipated geological factors, risks associated with the interpretation of assay results and the drilling program, the possibility that the Company may not be able to secure permitting and other governmental clearances necessary to carry out the Company's exploration plans, the risk that the Company will not be able to raise sufficient funds to carry out its business plans, and the risk of political uncertainties and regulatory or legal changes that might interfere with the Company's business and prospects. The reader is urged to refer to the Company's Annual Information Form and Management's discussion and Analysis, publicly available through the Canadian Securities Administrators' System for Electronic Document Analysis and Retrieval (SEDAR) at [www.sedar.com](http://www.sedar.com) for a more complete discussion of such risk factors and their potential effects.
