

Green Battery Minerals Inc. Samples 9.0m of 17.02% on Surface at Zone 6

16.02.2023 | [The Newswire](#)

Vancouver, February 16, 2023 - [Green Battery Minerals Inc.](#) ("Green" or the "Company") (TSXV:GEM) (FSE:BK2P) (WKN:A2QENP) (OTC:GBMIF) is pleased to announce assay results from the surface work conducted at Zone 6 last summer. The program was planned to follow up on a previous prospecting efforts covering a regional EM anomaly, as well as prepare trails for a subsequent drill program which took place last autumn and for which assays are still pending.

A total of 4 areas of graphite outcrop over a strike length of ~600m were exposed and cleaned for the collection of 117 channel samples. An additional 19 grab samples were collected over a total strike length of ~1600m at Zone 6. Surface observations indicate that Zone 6 is a fold with separate limbs extending westwards from a fold nose at Area 4. Graphite encountered on surface during this campaign proved to be much broader than initially discovered during the 2019 prospecting campaign where teams were limited to hand tools (see October 1, 2019 news release), however steep terrain prevented the excavator from reaching core of the fold nose.

Graphite horizons were consistently noted amidst the quartz rich gneisses in the lower section of the highly prospective Mehinek formation and often in association with a hornblende-garnet-amphibole gneiss which marks the base of the graphite rich paragneiss unit.

Notable results from the channel sampling are presented in the table and Figures 1-4 below:

Area 1 9.0m @ 17.02% Cgr

Area 2 4.2m @ 18.15% Cgr

Area 3 8.2m @ 13.30% Cgr

8.7m @ 9.53% Cgr

7.8m @ 20.70% Cgr

Area 4 7.7m @ 7.49% Cgr

Additional grab sampling along the strike of the EM anomaly to the northwest has confirmed graphite mineralization over a total strike length of ~1600m (Figure 5).

All 4 graphite outcrops with channel sampling were drilled with multiple holes during the subsequent drill campaign (see October 6, 2022 news release). Assays are expected sometime in March.

Tom Yingling, President and CEO of Berkwood: "Our systematic exploration of Zone 6 deepened our understanding of the geology and structure and yielded 4 exceptional graphite outcrops as targets for the subsequent drill campaign. We look forward to releasing these results when assays are received in March."

About the Berkwood Graphite Project

The Berkwood Graphite Project is located within the jurisdiction of Quebec, in the Manicouagan Regional County Municipality, three hours driving time from the city of Baie-Comeau. Easy access is provided via a major secondary road and numerous tertiary and forest roads that traverse the property.

The Zone 1 deposit lies 8 km southwest of Mason Graphite's deposit which is the subject of a current feasibility study. The Company believes its Zone 1 deposit and that of Mason share many similar geological characteristics with the Zone 1 deposit being one of the highest-grade graphite deposits in the world.

The current mineral resource at the Berkwood Graphite Project includes in-pit constrained resource totalling 1,755,300 tonnes of indicated resources at 17.00 % Cgr and 1,526,400 tonnes in inferred resources at 16.39 % Cgr.

Table 2: In-pit Resource at Lac Gueret South Project (rounded numbers)

The mineral resource estimates above are described in the technical report entitled, NI 43-101 Technical Report Mineral Resource Estimate on the Lac Gueret South Graphite Property, Quebec, Canada. With an Effective date of June 19th, 2019, dated June 30th, 2019, by Edward Lyons, PGeo., Florent Baril, ing., and Claude Duplessis, ing. Qualified Person: Mr. Luke van der Meer, P.Geo. is a Qualified Person ("QP") as defined by National Instrument 43-101 guidelines, and he has reviewed and approved the technical content of this news release.

About the Company: Green Battery Minerals is managed by a team with over 150 years collectively with a proven track record of not just finding numerous mines but building and operating them too. The Green Battery Mineral management team's most recent success is discovering the Berkwood graphite resource in Northern Quebec. Green Battery Mineral owns this asset 100 percent, and the Company's shareholders will benefit from this asset as the demand for Graphite for electric vehicles increases significantly.
