

Scottie Resources Intercepts 17.4 G/t Gold Over 6.57 Metres On Blueberry Zone And Extends Strike Length To 1,550 M

02.03.2023 | [CNW](#)

VANCOUVER, March 2, 2023 - [Scottie Resources Corp.](#) ("Scottie" or the "Company") (TSXV: SCOT) (OTCQB: SCTSF) (NYSE: SR8) is pleased to report new assays on its Blueberry Zone including a high-grade intercept of 17.4 g/t gold over 6.57 metres on drillhole SR22-217. Scottie also confirms high grade mineralization in its furthest expansionary hole (SR22-227) along the extension of the Blueberry Contact zone where 7.10 g/t gold over 6.09 metres was intercepted. The total strike length of the Blueberry Contact zone now extends over 1,550 metres, representing an increase of over 110% from 2021.

Highlights

- Deep test hole SR22-217 returned 17.4 g/t gold over a core length of 6.57 m including 56.6 g/t gold over a core length of 1.43 metres.
- Drillhole SR22-227, extending 7.10 g/t gold over 6.09 metres, confirms high grade mineralization in its furthest expansionary hole along the extension of the Blueberry Contact zone where 7.10 g/t gold over 6.09 metres was intercepted.
- The total strike length of the Blueberry Contact zone now extends over 1,550 metres, representing an increase of over 110% from 2021.

VP Exploration, Dr. Thomas Mumford: "2022 was a transformative year for our understanding and expansion of the Blueberry Contact Zone. Utilizing just 7,000 metres of SR22-227 drilling, our aggressive approach fundamentally redefined the system. The outstanding result of both doubling of the strike length of the system and increasing the depth of the system by 75% to 400 metres, is made that much more significant with the fact that the high-grade mineralization occurs at the system's margins. Drilling in 2023 will pick up where we left off last year and continue expand the boundaries of the system on numerous peripheral targets like the C and D zones."

This release constitutes the final results from Scottie's 2022 drill program on the Blueberry Contact Zone. All significant drill results that occur along the Blueberry Contact Zone have now been reported. Drill results from other exploration targets are unreported and will be reported following a detailed interpretation.

The Blueberry Contact Zone is located just 2 kilometres northeast of the 100% owned, past-producing Scottie Gold Mine located in the mineralizing Columbia, Canada's Golden Triangle region. Historic trenching and channel sampling of the Blueberry Vein include results of 103.94 g/t gold over 1.43 metres, and 203.75 g/t gold over 1.90 metres. Despite high-grade surficial samples and easy access, the Blueberry Vein had only limited reported drilling prior to the Company's exploration work. The target was significantly advanced during Scottie's 2019 drill program when an interval grading 7.44 g/t gold over 34.78 metres was intersected along the splay off zone of the main Blueberry Vein. The drill results received in 2020 and 2021, coupled with surficial mapping and the advanced during Scottie's 2019 drill program when an interval grading 7.44 g/t gold over 34.78 metres was intersected along the splay off zone of the main Blueberry Vein. The drill results received in 2020 and 2021, coupled with surficial mapping and the suggest that this splay is in fact a major N-S mineralized structure, of which the Blueberry Vein was only a secondary splay. The zone is steeply dipping, and there is no current restraint on its potential depth; the mineralization at the adjacent Scottie mine has a vertical extent greater than 450 metres. The Blueberry Zone is located on the Granduc Road, 20 kilometres north of the nearest reported hole on the Granduc Road, 20 kilometres north of the nearest reported hole.

* True thicknesses of mineralized intercepts are undetermined

Thomas Mumford, Ph.D., P.Geo and VP Exploration of Scottie, a qualified person under National Instrument 43-101, has reviewed the technical information contained in this news release on behalf of the Company.

Quality Assurance and Control

Results from samples taken during the 2022 field season were analyzed at SGS Minerals in Burnaby, BC. The sampling program was undertaken under the direction of Dr. Thomas Mumford. A secure chain of custody is maintained in transporting and storing of all samples. Gold was assayed using a fire assay with

atomic absorption spectrometry and gravimetric finish when required (+9 g/t gold). Analysis by four acid digestion with multi-element ICP-AES analysis was conducted on all samples with silver and base metal over-limits being re-analyzed by emission spectrometry.

ABOUT SCOTTIE RESOURCES CORP.

Scottie owns a 100% interest in the Scottie Gold Mine Property which includes the Blueberry Zone and the high-grade, past-producing Scottie Gold Mine. Scottie also owns 100% interest in the Georgia Project which contains the high-grade past-producing Georgia River Mine, as well as the Cambria Project properties and the Sulu property. Altogether Scottie Resources holds more than 60,000 hectares of mineral claims in the Stewart Mining Camp in the Golden Triangle.

The Company's focus is on expanding the known mineralization around the past-producing mines while advancing near mine high-grade gold targets, with the purpose of delivering a potential resource.

All of the Company's properties are located in the area known as the Golden Triangle of British Columbia which is among the world's most prolific mineralized districts.

Forward Looking Statements

This news release may contain forward-looking statements. Forward looking statements are statements that are not historical facts and are generally, but not always, identified by the words "expects", "plans", "anticipates", "believes", "estimates", "intends", "may", "will", "should", "could", "potential", "possible" and similar expressions. Brad Hauke, President and CEO, +1-250-877-9900, bhauke@scottie-resources.com, Business Development of Scottie Resources Corp. scottie@scottie-resources.com or "should" occur. Although the Company believes the

expectations expressed in such forward-looking statements are based on reasonable assumptions, such as the availability of capital resources, the success of exploration and development activities, and the accuracy of geological and other data, forward looking statements are not guarantees of future performance and actual results may differ materially from those in forward looking statements. Forward looking statements are based on the beliefs, estimates and opinions of

the Company's management on the date such statements were made. The Company expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events, or otherwise.
