

Antler Gold Is Awarded the Ufipa Gold Project Located in Fertile Ubendian Belt, North-East Zambia

31.05.2023 | [Newsfile](#)

Halifax, May 31, 2023 - [Antler Gold Inc.](#) (TSXV: ANTL) ("Antler" or "Company") is pleased to announce that it has been granted three new gold exploration licenses targeting the extension of the highly-fertile Ubendian belt into north-east Zambia. The Eastern Ubendian Corridor is well established as a producing gold terrane which includes 4 significant gold fields (Lupa, Mpanda, Amani and Niassa), with the Lupa Goldfields hosting the >1MOz New Luika Gold Mine ("NLGM")¹. The combined licenses, named the Ufipa Gold Project, cover an extensive 473,627 ha offering a district scale opportunity for establishing a new gold field in the unexplored western extension of the Ubendian Belt. The project forms part of Antlers 87.5% held subsidiary, Antler PG (see news release dated March 24, 2022).

"We are pleased to have been granted these new exploration licenses in Zambia, particularly in an area that is increasingly gaining recognition for hosting large, economically viable gold deposits. This is a highly prospective region for gold exploration, and we are eager to begin our work there," said Christopher Drysdale, CEO of Antler Gold. "Antler Gold continues to focus on securing technically sound projects, attracting reputable and well-funded industry players, and reinforcing our status as a trusted project generator. The Ufipa Gold Project is a commanding land position in this highly prospective region, which adds to our growing portfolio of projects across southern Africa, and we look forward to unlocking the value of this for the benefit of our shareholders."

Location and Geology of the Ufipa Gold Project

The 4,736 km² Ufipa Gold Project is made up of 3 large exploration licenses which are located in the Northern and Eastern provinces of Zambia, approximately 800 km northeast of the Zambian capital of Lusaka.

The Ubendian Belt is a highly fertile gold region that contains orogenic gold deposits which are related to the reworking of Archean crust during younger orogenic events (2). The Eastern Ubendian Corridor ("EUC", Figure 2) is proven to be fertile with 4 known gold fields (Mpanda, Lupa, Amani and Niassa, Figure 2). Of these gold fields, the Lupa Goldfields hosts the NLGM, which produced approximately 648KOz Au between 2013 and 2020 (3), and resources of 1.03 MOz Au (1). In the known gold fields of the EUC, Au mineralization occurred over a period of >1Ga, with potential for orogenic Au mineralization in the Ufipa Gold Project of the WUC during 3 orogenies (Ubendian; Iridiumide/Kibaran; Pan-African). This extension of the WUC into Zambia has not been previously recognized and has the potential to emerge as a new gold district.

The Ufipa Gold Project (Figure 2) hosts a variety of potential favorable host rock and structures considered to be favorable targets to explore for potentially economic orogenic Au deposits. The area is historically underexplored with regards to orogenic Au and modern low level analytical detection limits.

Exploration Program planned for 2023

Antler is planning to initiate exploration activities at the Ufipa Gold Project soon, with a particular emphasis on assessing the potential for orogenic gold deposits. The Company is currently working on obtaining an

Environmental Project Brief from the Zambian Environmental Management Agency (ZEMA), and once secured, field activities will promptly begin. Antler is committed to keeping all stakeholders informed and will provide regular updates on the progress of the exploration program.
