

Dominion Energy Virginia Offers Customers Assistance and Cooling Tips as Summer Begins

21.06.2023 | [PR Newswire](#)

RICHMOND, June 21, 2023 - With warmer temperatures approaching, Dominion Energy Virginia is offering customers several bill assistance options and ways to save, while staying cool this summer.

"When dealing with extremely hot temperatures, we recommend starting at the thermostat," said Ed Baine, President of Dominion Energy Virginia. "Up to 50% of a customer's annual energy costs come from heating and cooling. We recommend focusing on ways to keep your home cool without overusing your air conditioning unit to avoid higher energy bills. Simple things like raising your thermostat a couple of degrees, while using fans, and closing blinds and curtains during the hottest parts of the day, can help reduce your energy bill."

3 Summer Cooling Tips

- Set the thermostat to 78 degrees or higher. Each degree can make a real difference in energy usage and your electricity bill. Especially when leaving home for more than eight hours, consider raising your thermostat to conserve energy.
- Keep window shades closed when the air conditioner is running. Sunny windows can increase the temperature of your home, leading air conditioning units to work much harder to maintain a comfortable climate.
- Install ceiling fans and make sure they are blowing counterclockwise. Installing fans in your home can both lower your energy usage and the temperature of your home.
