

Stria Lithium Inc. Announces New U.S. Quotation on OTCQB Venture Market under Symbol SRCAF

18.07.2023 | [The Newswire](#)

Ottawa, July 18, 2023 - [Stria Lithium Inc.](#) (TSXV:SRA) (OTC:SRCAF) ("Stria Lithium", the "Company") is pleased to announce that its common shares have been approved for quotation on the OTCQB® Venture Market (the "OTCQB") effective July 17. The Company's U.S. listing will be quoted under the symbol SRCAF, whilst the Company's primary Canadian listing will continue to trade on the TSX Venture Exchange under the symbol SRA.

The OTCQB provides value and convenience to U.S. investors, brokers and institutions seeking to trade the shares of the company.

Alongside this effort, the Company also expects to be eligible for electronic clearing and settlement through the Depository Trust Company ("DTC"), which acts as a clearing house to settle trades in the United States, which will further the liquidity of the Common Shares.

The OTCQB® Venture Market offers investors transparent trading in entrepreneurial and development stage U.S. and international companies. To qualify for OTCQB, companies must meet high financial and securities reporting standards, pass a bid test, and undergo annual verification. As a verified market with access for U.S. investors, OTCQB helps companies build shareholder value, achieve liquidity and a fair valuation. It will also enable the Company to expand its awareness and broaden its range of potential investors into the North American market.

Stria Lithium CFO, Judith Mazvihwa-MacLean commented: "We are excited for Stria Lithium to trade on the OTCQB. This Exchange gives Stria Lithium access to the world's largest investment market, which will increase our shareholder base and trading activity in the U.S."

About Stria Lithium

Stria Lithium (TSX-V: SRA) is an emerging resource exploration company developing Canadian lithium reserves to meet legislated demand for electric vehicles and their rechargeable lithium-ion batteries.

Lithium is a rare metal and an indispensable component of rechargeable lithium-ion batteries, one of the safest and most efficient energy storage technologies available today, used in everything from cell phones and power tools to electric cars and industrial-scale energy storage for renewable power sources such as wind and solar generation.

Stria's Central Pontax Lithium Project covers 36 square kilometres, including 8 kilometres of strike along the prospective Chambois Greenstone Belt. The region, known as the Canadian "Lithium Triangle," is one of only a few known sources of lithium available for hard rock mining in North America.

Stria has entered into a JV agreement with Cygnus Metals (ASX:CY5) on its Pontax Central project. Cygnus Metals is committed to fully funding and managing the current two-stage exploration and drilling program to a maximum of \$10 million at Stria's Pontax property, and will also pay Stria up to \$6 million in cash. In return, Cygnus may acquire up to a 70% interest in the property. Cygnus has fulfilled its stage 1 requirements within the agreement and has now earned its 51% interest in the property as per above share issuance.

Stria's other significant project, Pontax II covers 55 square kilometres, approximately 25 kilometres to the

west-south-west of Pontax Central and is located adjacent to the Billy-Diamond paved highway. Stria has added to this project by recently acquiring 24 claims, for 1276.5 hectares that are strategically located northeast of Stria's Pontax II claims.

Stria Lithium previously reported highly anomalous tantalum oxide grain counts in till samples up to 797 grains, the highest count ever recorded by the laboratory. The Pontax II grain counts stand at the 97.6 centile of the regional population with an average of 156 grains per sample as a comparative basis, a regional survey in the same area conducted by the Ministère de l'Énergie et des Ressources Naturelles du Québec, processed a total of 5950 tantalum oxide grains yielding an average count of 36 grains per samples. The conclusion being the grain counts are suggestive of the proximity of lithium bearing pegmatites.

Pontax II claims are in highly active prospective zones, situated to the west southwest of Stria/Cygnus lithium discovery and situated to the west of the Patriot Battery Metals (PMET.V) Pontax project, and south of Brunswick Exploration (BRW.V).

Stria's Pontax properties are both situated close to an industrial powerline and a major paved highway, about 310 km north of the North American rail network that leads to the industrial heartland.

As momentum builds for the green energy revolution and the shift to electric vehicles, governments in Canada and the U.S. are aggressively supporting the North American lithium industry, presenting the industry and its investors with a rare, if not unprecedented, opportunity for growth and prosperity well into the next decade and beyond.

Stria is committed to exceeding the industry's environmental, social and governance standards. A critical part of that commitment is forging meaningful, enduring and mutually beneficial relationships with the James Bay Cree Nation (Eeyouch), and engaging openly and respectfully as neighbours and collaborators in this exciting project that has the potential to create lasting jobs and prosperity for Eeyou Istchee and its people.
