Trailbreaker Resources Extends Surficial Gold Signature at Golden Sable Property, South-Central BC

14.09.2023 | GlobeNewswire

VANCOUVER, Sept. 14, 2023 - Trailbreaker Resources Ltd. (TBK.V) ("Trailbreaker" or "the Company") is pleased to announce results from its 2023 surficial exploration program at the Golden Sable property in south-central British Columbia (BC). Efforts were focused on investigating a historic 3-kilometre-long gold-in-soil anomaly. The program was successful in extending the anomaly a further 1 kilometre to the southeast, where it remains open.

Daithi Mac Gearailt, CEO of Trailbreaker, commented: *"This was an excellent first-pass evaluation of a property with known gold mineralization. There is a very significant gold-in-soil trend here, with historic drilling to verify the presence of gold mineralization in bedrock."*

About the Golden Sable property

The 2,852-hectare Golden Sable property is located 75 km northeast of Kamloops, BC, and 20 km south of Bridge Lake, BC. It is easily accessible via Highway 24 and the Bonaparte Forest Service Road. Golden Sable comprises two main areas, Golden Sable (GS) East and GS West, which are contiguous (see Figure 1 and May 29, 2023 news release).

The Golden Sable property covers an intrusion-related gold target. The claims lie within the Quesnel tectonic terrane that hosts many of British Columbia's active and past-producing gold mines. Middle to Upper Triassic Nicola Group volcanics and sedimentary rocks comprise the majority of the underlying bedrock geology. The property also straddles the margins of a large, early Jurassic hornblende-biotite granodiorite pluton with prevalent younger mafic and andesitic dikes.

From 2006 to 2013 Amarc Resources delineated the 3-kilometre-long soil anomaly on the GS West block, which was subsequently drill tested by Sable Resources in 2018.

The inaugural, 1,339-metre drill program conducted by Sable Resources on the GS West block encountered gold mineralization in 5 of 7 drill holes. Results include an intersection of 0.83 g/t gold (Au) over 24.0m, including 2.4 g/t gold over 4.0m. Gold mineralization was found to be associated with mafic and intermediate dike swarms trending northwest - southeast along the granitic contacts.

No follow-up drilling has been conducted to date, and the majority of the gold-in-soil anomaly remains untested.

Trailbreaker's 2023 exploration program

The 2023 surficial exploration program was designed to evaluate the quality of the historic soil sample locations, locate the historic drill holes, map and prospect available outcrops, and continue soil sampling to the southeast of the GS West historic gold-in-soil trend.

The program was successful in extending the GS West gold-in-soil anomaly 1 km farther to the southeast, where it remains open. Assaying of the soil samples within this trend returned values up to 242 ppb Au (see Figure 2).

A tightly-spaced soil sample grid was also performed over historic soil samples in the area of drilling to evaluate the consistency and quality of previous results. Assay results within this grid returned values up to 601 ppb Au and displayed a similar anomalous signature to that of the historic soil sampling, confirming the validity of the historic anomaly.

Geological mapping revealed outcrops of granite and andesitic dikes within the gold-in-soil trend. Significant pyrite mineralization occurs in the area of the historic drilling.

Forward-Looking Statements

Statements contained in this news release that are not historical facts are "forward-looking information" or "forward-looking statements" (collectively, "Forward-Looking Information") within the meaning of applicable Canadian securities legislation and the United States Private Securities Litigation Reform Act of 1995. Forward-Looking Information includes, but is not limited to, disclosure regarding possible events, conditions or financial performance that is based on assumptions about future economic conditions and courses of action; expectations regarding future exploration and drilling programs and receipt of related permitting. In certain cases, Forward-Looking Information can be identified by the use of words and phrases such as "anticipates", "expects", "understanding", "has agreed to" or variations of such words and phrases or statements that certain actions, events or results "would", "occur" or "be achieved". Although Trailbreaker has attempted to identify important factors that could affect Trailbreaker and may cause actual actions, events or results to differ materially from those described in Forward-Looking Information, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. In making the forward-looking statements in this news release, if any, Trailbreaker has applied several material assumptions, including the assumption that general business and economic conditions will not change in a materially adverse manner. There can be no assurance that Forward-Looking Information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on Forward-Looking Information. Except as required by law, Trailbreaker does not assume any obligation to release publicly any revisions to Forward-Looking Information contained in this news release to reflect events or circumstances after the date

hereof or to reflect the occurrence of unanticipated events.
