

Sanatana Identifies 1km by 2km Chargeability Anomaly at the Oweege Dome Project, Golden Triangle, BC

04.10.2023 | [Newsfile](#)

Highlights:

- 8.5 line kilometre 3-D induced polarization ("IP") survey expanded coverage over 1 km to the east and augmented 2021 and 2022 surveys.
- The "Junction", now a large 2 km by 1 km anomaly, is thought to represent the main body of mineralization at Oweege and provides a compelling drill target.

Vancouver, October 4, 2023 - [Sanatana Resources Inc.](#) (TSXV: STA) ("Sanatana" or the "Company") is pleased to provide an exploration update on completion of the 2023 IP program at the Oweege Dome copper-gold (Cu-Au) porphyry project located beside pavement and power in BC's Golden Triangle.

For this work, Sanatana contracted Dias Geophysical's distributed array deep IP ("DCIP") survey system. This system provides full, high quality, and high-resolution 3-D resistivity and induced polarization models of the subsurface.

The 2023 IP program was completed between late August and mid-September and comprised 8.5 line-kilometres of IP geophysical surveying. This program expands and improves surveys completed in 2021 and 2022. The primary goal of the 2023 survey was to test mineralization discovered in 2022 on the east side of Bear Valley and to close off the Junction anomaly discovered in 2022.

Remarkably, the 2023 program greatly enlarged the Junction anomaly which now extends over 1,000 m wide, 2,000 m along strike and extends to depth limits of the survey (about 800 m below surface). See figures 1 and 2.

Peter Miles, Sanatana's CEO, commented, "Sanatana's 2023 IP program aimed to close off the Junction anomaly and test for geophysical porphyry response on the east side of Bear Valley which is largely obscured by post mineral cover. We are very pleased to see the results, especially the 1,000 m by 2,000 m footprint of the Junction anomaly which now becomes a primary drill target for our planned 2024 drill program."

Buddy Doyle, President, said, "IP is an important geophysical tool, and its use has led to numerous examples of exploration success both within the Golden Triangle and elsewhere. The Junction anomaly is a compelling drill target. Previous drilling at Delta Ridge targeting the Crescent IP anomaly gave us long intersections of Cu Au Ag Mo mineralization consistent with being in the upper levels of a significant porphyry system. We interpret this to be the 'head' of the system and the Junction anomaly to be the main 'body' of the system. I look forward to drill testing this target in 2024."

Figure 1: Plan view of the IP survey, showing main chargeability anomalies. IP chargeability 12 - >18 mV/V iso-surfaces with drill hole traces in green and historic drill hole traces in white.

The technical information in this news release was prepared under the supervision of Buddy Doyle B.App Sc Geology, MAUSIMM. Mr. Doyle is a Qualified Person for the purposes of National Instrument 43-101 - Standards of Disclosure for Mineral Projects and has reviewed and approved the technical information disclosed in this news release.

About the Company

[Sanatana Resources Inc.](#) is a mineral exploration and development company focused on high-impact properties in Canada. With an award-winning technical team and experienced management and board of directors, Sanatana is based in Vancouver and is listed on the TSX Venture Exchange (TSXV: STA).

Sanatana's principal project is the Oweege Dome copper-gold porphyry property which is situated 40 km east of the KSM - Brucejack - Treaty Creek cluster of base and precious metal deposits and is underlain by similar geologic conditions, Stuhini Group (Triassic age) host rocks, intrusions of the right age, alteration and porphyry style copper - gold - silver - molybdenite mineralization.

Cautionary Statement Regarding "Forward-Looking" Information

This news release includes "forward-looking statements" and "forward-looking information" within the meaning of Canadian securities legislation. All statements included in this news release, other than statements of historical fact, are forward-looking statements including, without limitation, statements related to the Company's exploration program for Oweege.

Forward-looking statements and information can be identified by the use of words such as "plans", "expects", "intends", "is expected", "potential", "suggests" or variations of such words or phrases, or statements that certain actions, events or results "may", "could", "should", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements and information are not historical facts and are subject to a number of risks and uncertainties beyond Sanatana's control. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this news release. Accordingly, readers should not place undue reliance on forward-looking statements. The Company undertakes no obligation to update publicly or otherwise revise any forward-looking statements, except as may be required by law.

Neither TSX Venture Exchange nor its Regulations Services Provider (as that term is defined in policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
