

American Eagle Releases Updated Technical Presentation and Webinar

18.01.2024 | [Newsfile](#)

Highlights:

- The updated Technical Presentation focuses on American Eagle's latest drill results, including 302 m of 1.09% Copper Equivalent within 606 m of 0.74% Copper Equivalent, beginning at 98 m downhole in NAK23-17.
- Technical Presentation details NAK's IP survey and its correlation to the highest grade intersections that will guide high-priority targets for 2024's drill campaign.
- American Eagle has posted a webinar with its technical team discussing these results.
- American Eagle will present at the Metals Investment Forum on January 20 and attend the Vancouver Resources Investment Conference on January 21st and 22nd.
- Drill Core from NAK's 2024 Drill program will be displayed at AME's Mineral Exploration Roundup Core Shack on January 24 and 25 at Booth 820.

Toronto, January 18, 2024 - [American Eagle Gold Corp.](#) (TSXV: AE) (OTCQB: AMEGF) ("American Eagle" or the "Company") is pleased to share an updated comprehensive Technical Webinar and Presentation on its NAK project, located near Smithers, British Columbia, Canada. The Company is also pleased to provide details of its executive and technical team's participation at three Vancouver, British Columbia conferences during January 2024.

- [Please get in touch with the Company to arrange an in-person meeting at any of these conferences.](#)

[About American Eagle's NAK Project](#)

The NAK Project lies within the Babine copper-gold porphyry district of central B.C. It has excellent infrastructure, being accessed by a network of active all-season logging roads, and being supported by proximity not only by nearby logging camps, but also by the vibrant town of Smithers B.C., through which a cross-Canada rail line and a major Provincial Highway (Hwy. 16) pass. The property is also close to the past-producing Bell and Granisle open pit Cu-Au mines. Historical drilling and geophysical, geological and geochemical work at NAK, which began in the 1960's, tested only to shallow depths, but the work revealed a very large near-surface copper-gold system that measures over 1.5 km x 1.5 km. Drilling by the Company in 2022 and 2023 has returned significant intervals of high grade copper-gold mineralization that lie beyond the extent of historical drilling, indicating that a number of zones of near surface and deeper mineralization, locally with considerably higher grades, exist within the broad NAK property mineralizing system.
