

Baselode Ready to Start Drilling at Catharsis Uranium Project

15.02.2024 | [Newsfile](#)

- New video published detailing uranium targets planned for this drill program
- Multiple untested targets will be drilled with this program
- Drill and crews are on site, ready to start drilling

Toronto, February 15, 2024 - [Baselode Energy Corp.](#) (TSXV: FIND) (OTCQB: BSENF) ("Baselode" or the "Company") is pleased to provide details outlining drill plans for the Catharsis uranium project in northern Saskatchewan's Athabasca Basin area.

"We have completed extensive work to define Tier 1 target areas that share characteristics with other world-class basement-hosted Athabasca uranium deposits, such as NexGen Energy Ltd. (TSX: NXE) and Denison Mines Corp. (TSX: DML) Arrow and Gryphon deposits, respectively. The Catharsis drill program is ready to start, and our focus is to fast-track discovery by drilling multiple target areas with helicopter support," stated James Sykes, CEO, President, and Director of Baselode.

Please watch the Company's video (below) for more details about the drill program, including an explanation of target areas, exploration methodologies, and an overview of the Catharsis project.

Catharsis 2024 Exploration Plans

Catharsis Drill Program Details

8 to 10 drill holes for 2,000 metres ("m") are planned within 4 to 5 different untested target areas (Figure 2). All support staff and equipment, such as diamond drill and helicopter, are on site and the program is ready to start. The Company has received the necessary permits to complete the program.

The logistics support for a high-resolution airborne magnetic and radiometric survey is underway. The survey is planned for over 10,000 line-km with flight lines 50 m apart.

About Baselode Energy Corp.

Baselode controls 100% of approximately 272,804 hectares for exploration in the Athabasca Basin area of northern Saskatchewan, Canada. The land package is free of any option agreements or underlying royalties.

The Company discovered the ACKIO near-surface, uranium prospect in September 2021. ACKIO measures greater than 375 m along strike, greater than 150 m wide, comprised of at least 9 separate uranium Pods, with mineralization starting as shallow as 28 m and 32 m beneath the surface in Pods 1 and 7, respectively, and down to approximately 300 m depth beneath the surface with the bulk of mineralization occurring in the upper 120 m. ACKIO remains open at depth, and to the north, south and east.

Baselode's Athabasca 2.0 exploration thesis focuses on discovering near-surface, basement-hosted, high-grade uranium orebodies outside the Athabasca Basin. The exploration thesis is further complemented by the Company's preferred use of innovative and well-understood geophysical methods to map deep structural controls to identify shallow targets for diamond drilling.
