Grid Battery Renews Engagement with Triomphe Holdings Ltd. (DBA Capital Analytica) To Provide Social Media Services

07.03.2024 | The Newswire

Grid Battery Metals Inc. (the "Company" or "Grid") (TSXV:CELL) (OTC:EVKRF) (FRA:NMK2) announces that it has renewed its contract with Triomphe Holdings Ltd. (dba Capital Analytica) ("Capital Analytica") to provide a multi-faceted Promotional Enhancement Service. Capital Analytica is a Nanaimo, BC based company.

The Company has entered into a Consulting Agreement (the "Agreement) with Capital Analytica dated March 6, 2024. Pursuant to the Agreement, Capital Analytica has agreed to provide services to the Company and the Company will pay Capital Analytica a fee of $60,000 upon TSX Venture Exchange ("Exchange") approval for a term of six months, with an option to renew the Agreement for an additional six-month term. The services will include on-going social media consultation regarding engagement and enhancement, social sentiment reporting, social engagement reporting, discussion forum monitoring and reporting, corporate video dissemination and other related investor relation services. The Agreement is subject Exchange approval.

Capital Analytica and Grid are not related parties and operate at arm's length. Neither Capital Analytica nor its principals have any interest in the Company's securities, directly or indirectly, or any right or intent to acquire such an interest.

About Grid Battery Metals Inc.

Grid Battery Metals Inc. is a Canadian based exploration company whose primary listing is on the TSX Venture Exchange. The Company's maintains a focus on exploration for high value battery metals required for the electric vehicle (EV) market.

About Texas Springs Property

The Company owns a 100% interest in the Texas Spring Property which consists of mineral lode claims located in Elko County, Nevada. The Property is in the Granite Range southeast of Jackpot, Nevada, about 73 km north-northeast of Wells, Nevada. The target is a lithium clay deposit in volcanic tuff and tuffaceous sediments of the Humbolt Formation. A Phase 1 exploration program at the Texas Springs Property (Fall 2023) yielded results with average lithium grades of 2010 ppm, applying a 1,000 ppm cut-off, and up to 5,610 ppm Lithium.

The Texas Spring property adjoins the southern border of the Nevada North Lithium Project - owned by Surge Battery Metals Inc. ("Surge") (TSXV: NILI, OTC: NILIF) and comprised of 725 mineral claims. Surge's first round of drilling identified strongly mineralized lithium bearing clays. The average lithium content within all near surface clay zones intersected in the 2022 drilling program, applying a 1000 ppm cut-off, was 3254 ppm. (Press release March 29, 2023). More recent results have shown higher grade lithium up to 8070 ppm on this property after initial drilling (Press release September 12, 2023). Our exploration results are on-trend with these results.

About Clayton Valley Lithium Project

The Company owns a 100% interest in 113 lithium lode and placer claims covering over 640 hectares in

Clayton Valley. Clayton Valley is a down-dropped closed basin formed by the Miocene age Great Basin extension and is still active due to movement along the Walker Lane structural zone. As a result, the basin has preserved multiple layers of lithium bearing volcanic ash, resulting from multiple eruptive events over the past 6 million years including eruptions from the 700,000-year-old Long Valley Caldera system and related events. These ash layers are thought to contribute to the lithium brines extracted by Albemarle and are also likely involved in the formation of the exposed lithium rich clay deposits on the east side of Clayton Valley.

Volt Canyon Lithium Property

The Company owns a 100% interest in 80 placer claims covering approximately 635 hectares of alluvial sediments and clays located 122 km northeast of Tonopah, Nevada.

About the British Columbia, Nickel Projects

The Mount Sidney Williams Group consists of three claim blocks with a total area of 10,569 hectares in the area surrounding Mount Sidney Williams, both adjoining and near the Decar project of FPX Nickel Corp., located 100 kilometres northwest of Fort St. James, B.C., in the Omineca mining division. Metallic mineralization includes nickel, cobalt, and chromium. At least some of the nickel mineralization occurs as awaruite. The Mitchell Range Group area claim consists of one claim block covering 8,659 hectares with demonstrated metallic mineralization including nickel, cobalt, and chromium. Nickel cobalt mineralization has not been well explored, but the presence of awaruite has been documented. The Company's B.C. Nickel properties are held within Grid's wholly-owned subsidiary, AC/DC Battery Metals Inc.

The Company has previously announced plans to spin out its wholly-owned subsidiary, AC/DC Battery Metals Inc., finance it separately, and separately list it on the TSX Venture Exchange in 2024. This transaction once complete, will provide a valuable share dividend to each Grid Shareholder of record for no additional cost.
