

White Cliff (ASX:WCN) unfurls historic high-grade uranium-copper from Northwest Territories

26.03.2024 | [CNW](#)

PERTH, March 26, 2024 - White Cliff Minerals dataset digitisation efforts have unearthed multiple high-grade uranium and copper targets in the northern half of its large-scale Radium Point exploration project in Canada's Northwest Territories.

The older historical datasets were high quality, with their highly anomalous rock chip results surpassing White Cliff's expectations with a collection of large and high-grade uranium-copper-gold and silver targets now ready for field season.

And while the area has been a significant producer of the target commodities, follow-up work here appears to be limited, providing the chance for White Cliff to identify extensions of past-exploited deposits with high potential for IOCG-uranium style mineralisation.

White Cliff Chairman Roderick McIlree said it had taken significant time to collate and verify the results, but they were well worth the wait.

"Work continues on the assimilation of the remaining datasets for the balance of the 2,900-square kilometre licence area and the tenor of these results already gives us great confidence in our upcoming field season," he said.

McIlree added it was important to stress the results were only from the northern half and near-mine project areas, excluding the south. "Utilising this new database of targets alongside geochemistry would greatly assist with the team's finalisation of target areas," he said.

"The area to the south contains results that appear higher grade in nature with a larger surficial expression however we will need more time to complete the verification process for this vast area and will release these results in due course," he said.

"I am very comfortable saying this is the most exciting multi-element project I have seen, even though this is a first pass. The near-mine and regional anomalies I am confident we are well placed to make significant discoveries on our ground during the coming year. I can make no guarantees, but with results like this, on only half of the assessed ground to date, it's worth making every effort to drill this project during the coming year."

White Cliff will now conclude its Canadian work programs for the year ahead, both at Radium Point and its Coppermine project, aiming to deploy a holistic campaign to leverage all available synergies across the expansive landholdings.

Highlight results:

Thompson Showing

- 14.15 per cent uranium oxide, 6.22 grams per tonne gold and 122g/t silver
- 7.5% copper, 1.63% U₃O₈, 729g/t Ag and 1.56g/t Au
- 15.15g/t Au, 6.6% Cu, 2.32% U₃O₈ 137g/t Ag, 1.11% cobalt and 0.58% nickel

Spud Bay

- 22.72% Cu, 619g/t (about 20 ounces) Ag and 0.59% lead
- 11.69% Cu, 1330g/t (~40oz) Ag, 8.30% zinc and 0.44% Pb
- 6.61% Cu, 1427g/t (~45oz) Ag, 3.66% Zn and 0.35% Pb

Bullwinkle

- 7.43% U₃O₈ and 2.77% Cu

Doghead South

- 1.56% U₃O₈, 10.30% Cu, 3.68g/t Au and 34g/t Ag
- 3.85% Cu, 4.05g/t Au and 7g/t Ag

Sparkplug Lake

- 8.28g/t Au, 1.86% Cu and 43.4g/t Ag
- 3.97% Cu, 4.42g/t Au and 12.4g/t Ag
- 3.01% Cu, 5.37g/t Au and 2.60g/t Ag
