Lithium Corporation Expands Portfolio with New Fluorspar Property

09.04.2024 | ACCESS Newswire

ELKO, April 09, 2024 - <u>Lithium Corp.</u> (OTCQB:LTUM) ("LTUM" or "the Company"), a North American exploration mining company focused on energy metals for the growing energy storage sector and high-tech industries, is pleased to inform investors the Company recently expanded its portfolio with the addition of a newly staked property prospective for hosting fluorspar mineralization.

The Las Pilas claim block, staked by <u>Lithium Corp.</u> in February 2024, is located in the Greenwood Mining Division in south central British Columbia, Canada. The approximately 5,178 acre (2095.54 hectare) property lies roughly three kilometers from the past producing Rock Candy Fluorspar mine. The mine produced around 51,500 tonnes of ore with an average grade of 68% CaF2, 22% SiO2 between 1918 and 1929. It closed during the Great Depression and never reopened. Another 60,000 tonnes of probable ore is estimated contained in the previously mined workings. While fluorite epithermal vein mineralization is known to extend from this area more than a kilometer north to Fluorine Lake, no modern work has been conducted to expand the size of the deposit.

<u>Lithium Corp.</u>'s claim block was staked on the basis of similar geology, stream sediment and water geochemistry as seen in the vicinity of the Rock Candy Mine. The highest fluorine value in the general area (750 ppm) was collected from a stream that drains northern portions of the Company's block. This is believed to be a strong indicator that similar or better mineralization occurs in the general area. The Company is excited about the potential of this prospective property, and anticipates commencing geochemical and geological surveys here within the month.

The US Government classifies fluorine, and its source mineral fluorspar, as critical and 'essential to national security and economic prosperity'. Fluorinated compounds have a growing role in advancing clean energy technology through their use in electrolyte salts, binders, and separator coatings in lithium-ion batteries. The presence of fluorinated additives imparts critical benefits to lithium-ion batteries including significantly improving thermal stability of the electrolyte and the related safety performance of the battery. A relationship between fluorinated additives and improved performance of lithium-ion batteries in sub-zero temperatures has also been demonstrated. Leading battery industry market intelligence firm Benchmark Minerals reports, "fluorspar demand from the lithium ion battery sector is expected to exceed 1.6 million tonnes by 2030".

Critical Mineral status includes fluorspar in targeted efforts by Government to facilitate and expand domestic mining, production, processing, and recycling in North America. Currently, 100% of US fluorspar consumption is satisfied by imports. China has a commanding lead in global fluorspar supply with 65% of world mine production.

About Lithium Corporation

<u>Lithium Corp.</u> is a Nevada based mineral exploration company devoted to exploring for energy storage related resources throughout North America. The Company is one of only a handful of Project Generators in the critical minerals space in North America. <u>Lithium Corp.</u>'s dual operational focus covers exploration activities on several lithium prospects in Nevada, USA, as well as titanium, rare earth elements, graphite and fluorspar properties in British Columbia, Canada. Both Nevada and British Columbia are worldclass mining jurisdictions.

<u>Lithium Corp.</u> concentrates its exploration expertise on the energy metals supply chain to help secure a sustainable future through renewable energy. The Company's newly staked fluorspar prospect is evidence of

Notice Regarding Forward-Looking Statements

This current report contains "forward-looking statements," as that term is defined in Section 27A of the United States Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Statements in this press release which are not purely historical are forward-looking statements and include any statements regarding beliefs, plans, expectations or intentions regarding the future.

Actual results could differ from those projected in any forward-looking statements due to numerous factors. Such factors include, among others, the inherent uncertainties associated with mineral exploration and difficulties associated with obtaining financing on acceptable terms. We are not in control of minerals prices and these could vary to make development uneconomic. These forward-looking statements are made as of the date of this news release, and we assume no obligation to update the forward-looking statements, or to update the reasons why actual results could differ from those projected in the forward-looking statements. Although we believe that the beliefs, plans, expectations and intentions contained in this press release are reasonable, there can be no assurance that such beliefs, plans, expectations or intentions will prove to be accurate. Investors should consult all of the information set forth herein and should also refer to the risk factors disclosure outlined in our most recent annual report for our last fiscal year, our quarterly reports, and other periodic reports filed from time-to-time with the Securities and Exchange Commission.
