About MVDP

MVDP is expected to enable the mine to process 236 million tonnes of copper sulphide reserves (which represent approximately 20% of total sulphide resources) over a 20-year expected mine life, in addition to existing oxide reserves. The MVDP involves the addition of a sulphide concentrator (nominal 32,000 ore tonnes per day) and tailings storage facility, and the expansion of the existing desalination plant and other minor infrastructure.
