In recent years, the importance of critical minerals has been increasingly recognized due to their indispensable role in various industries, including renewable energy, electronics, healthcare, and defense. As we navigate the challenges of a rapidly evolving global landscape, ensuring a secure and sustainable supply of these critical minerals has become paramount.

The Türkiye Critical Mineral Summit 2024 will serve as a dynamic platform for industry leaders, policymakers, academics, and experts to come together and address the most pressing issues facing the critical minerals sector. Through engaging discussions, interactive panels, insightful presentations, and networking opportunities, participants will explore innovative strategies, best practices, and collaborative solutions to meet the growing demand for critical minerals while promoting environmental stewardship and social responsibility.

Canada, through collaboration with the United States and other strategic nation partners, has benefited from having the critical mineral reserves, skilled workforce, infrastructure, technology and clean energy necessary to fuel a new lithium ion battery ecosystem. Our ability to responsibly mine the country's rich supply of minerals is bolstered by the fact we have some of the strongest environmental laws in the world, so that we can mine critical minerals while protecting the environment and cultural resources.

During the event, Mitchell will represent both Global Energy Metals as well as the Battery Metals Association of Canada, of which he is a Director of, to share an outlook on the fundamental changes impacting the battery metals market. During his speaking allotment he intends to emphasize how Canada, and North America as a whole, can play a crucial role, through companies like Global Energy Metals, in identifying strategic opportunities and be globally competitive in the sector as demand for critical materials grows and the push to regionalize supply chains is prioritized in an effort to meet demand for new energy technologies.

For those attending the conference who would like to schedule a meeting with Mitchell during the event or alternatively would like to schedule a one-on-one meeting outside of the event, please do so by email at info@globalenergymetals.com or phone at +1 (604) 688-4219.

Türkiye Critical Minerals Summit

This dynamic forum is not just an event but a nexus for global professionals and thought leaders. Engage in in-depth discussions on critical minerals, exploring challenges, opportunities, and the evolving industry landscape.

At this summit, anticipate a convergence of brilliant minds offering diverse perspectives and solutions. Delve

into Turkey's untapped potential, revealing strategic positioning, resource wealth, and global opportunities.

More than a conference, the Türkiye Critical Minerals Summit shapes the future of critical minerals, traversing industry frontiers and fostering global collaboration. Save the date for this unprecedented gathering, unlocking Turkey's potential and positioning it as a central player in the global critical minerals narrative. Welcome to a summit offering not just discussions but actionable insights resonating across the critical minerals landscape.

[Global Energy Metals Corp.](#)

(TSXV:GEMC | OTCQB:GBLEF | FSE:5GE1)

[Global Energy Metals Corp.](#) offers investment exposure to the growing rechargeable battery and electric vehicle market by building a diversified global portfolio of exploration and growth-stage battery mineral assets.

Global Energy Metals recognizes that the proliferation and growth of the electrified economy in the coming decades is underpinned by the availability of battery metals, including cobalt, nickel, copper, lithium and other raw materials. To be part of the solution and respond to this electrification movement, Global Energy Metals has taken a 'consolidate, partner and invest' approach and in doing so have assembled and are advancing a portfolio of strategically significant investments in battery metal resources.

As demonstrated with the Company's current copper, nickel and cobalt projects in Canada, Australia, Norway and the United States, GEMC is investing-in, exploring and developing prospective, scaleable assets in established mining and processing jurisdictions in close proximity to end-use markets. Global Energy Metals is targeting projects with low logistics and processing risks, so that they can be fast tracked to enter the supply chain in this cycle. The Company is also collaborating with industry peers to strengthen its exposure to these critical commodities and the associated technologies required for a cleaner future.

Securing exposure to these critical minerals powering the eMobility revolution is a generational investment opportunity. Global Energy Metals believes Now is the Time to be part of this electrification movement.

Cautionary Statement on Forward-Looking Information:

Certain information in this release may constitute forward-looking statements under applicable securities laws and necessarily involve risks associated with regulatory approvals and timelines. Although Global

Energy Metals believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements. Except as required by law, the Company undertakes no obligation to update these forward-looking statements in the event that management's beliefs, estimates or opinions, or other factors, should change.

GEMC's operations could be significantly adversely affected by the effects of a widespread global outbreak of a contagious disease, including the recent outbreak of illness caused by COVID-19. It is not possible to accurately predict the impact COVID-19 will have on operations and the ability of others to meet their obligations, including uncertainties relating to the ultimate geographic spread of the virus, the severity of the disease, the duration of the outbreak, and the length of travel and quarantine restrictions imposed by governments of affected countries. In addition, a significant outbreak of contagious diseases in the human population could result in a widespread health crisis that could adversely affect the economies and financial markets of many countries, resulting in an economic downturn that could further affect operations and the ability to finance its operations.
