RETRANSMISSION: Sienna Acquires the "Stonesthrow Gold Project" Bordering Ramp Metals Inc in Saskatchewan

20.06.2024 | Newsfile

Vancouver, June 20, 2024 - Sienna Resources Inc. (TSXV: SIE) (OTC Pink: SNNAF) (FSE: HRJ1) ("Sienna" or the "Company") wishes to announce the acquisition of the new "Stonesthrow Gold Project" in Saskatchewan. This new project consists of approximately 13,300 contiguous acres prospective for gold. This new project directly borders Ramp Metals Inc who just announced (June 17, 2024) 'multiple zones of gold mineralization, including 73.55 grams per tonne gold (Au) and 19.50 grams per tonne silver (Ag).' Sienna management cautions that past results or discoveries on properties in proximity to Sienna may not necessarily be indicative of the presence of mineralization on the company's properties.

Jason Gigliotti, President of Sienna states, "We are building up our assets in Saskatchewan, one of the most mining friendly jurisdictions in the world. This new gold project directly borders Ramp Metals Inc who just announced a significant gold discovery right beside Sienna's new property. Their shares have gone from $.145 to a high of .86 this week alone on this new gold discovery. This is shaping up to one of the most exciting new gold discoveries in Saskatchewan this year. Sienna management is very optimistic about this area and looks forward to commencing operations as soon as possible."

Recently, (May 23, 2024) Sienna acquired Case Lake West Cesium and Spodumene Pegmatite Project In the Larder Lake Mining division of Ontario, Canada, roughly 100 km north of Kirkland Lake, NE Ontario. This project consists of approximately 2,200 contiguous acres prospective for Cesium and Spodumene Pegmatites directly bordering Power Metals Corp's Case Lake cesium and pegmatite swarm discovery. On May 22, 2024 Power Metals announced "WORLD-CLASS CESIUM RESULTS UP TO 18.13% AT CASE LAKE." This was very exciting news regarding this growing cesium district. Sienna management cautions that past results or discoveries on properties in proximity to Sienna may not necessarily be indicative of the presence of mineralization on the company's properties.

Case Lake West Cesium and Spodumene Pegmatite Project

About Sienna Resources Inc.

Sienna has acquired the "Stonesthrow Gold Project", consisting of approximately 13,300 contiguous acres prospective for gold. Sienna has also recently acquired the "Case Lake West Cesium and Spodumene Pegmatite Project" in Larder Lake Mining division of Ontario, Canada roughly 100 km north of Kirkland Lake, NE Ontario. This project consists of approximately 2,200 contiguous acres prospective for Cesium and Spodumene Pegmatites. Sienna has also just acquired the 10,357 acre "Uranium Town Project" bordering Denison Mines Corporation, the 10,845 contiguous acre "Dragon Uranium Project" bordering Cameco Corporation and the 55,440 acre "Atomic Uranium Project" in the world renowned Athabasca Basin of Saskatchewan. Also, Sienna recently expanded the "Elko Lithium Project" in Elko County, Nevada. This project consists of approximately 1840 contiguous acres directly bordering Surge Battery Metals' "Nevada North Lithium Project" in Elko County, Nevada who announced the highest grade lithium deposit in the USA. Sienna is also one of the larger landholders in Clayton Valley Nevada. Sienna's Clayton Valley projects include the Blue Clay Lithium Project, the Silver Peak South Project, and the Clayton Valley Deep Basin Lithium Project. Clayton Valley is home to the only lithium production in North America, being Albemarle Corp's Silver Peak deposit. This project is also near Tesla Motors Inc.'s Gigafactory in Nevada. On March 18, 2021, Schlumberger New Energy Venture announced the development of a lithium extraction pilot plant through its new venture, NeoLith Energy in a strategic partnership with Pure Energy. The deployment of the pilot plant will be in Clayton Valley, Nevada, USA. The NeoLith Energy sustainable approach uses a differentiated direct lithium extraction (DLE) process to enable the production of high-purity, battery-grade lithium material while reducing the production time from over a year to weeks. Results from this pilot plant are expected in 2024 and could have a significant impact on the brine prospects within Clayton Valley Nevada as Sienna is located in the deepest section of this brine deposit.

This project was acquired via staking.
