

Aurion Drills 29.10 g/t Au Over 3.10 m and Expands Gold Mineralized System at Kaaresselkä on the Wholly Owned Risti Property

09.09.2024 | [CNW](#)

- Gold mineralized system expanded in multiple directions at the Vanha prospect
- Gold intersects include 29.10 g/t Au over 3.10 m, 3.35 g/t Au over 9.85 m, 2.77 g/t Au over 9.00 m, 3.92 g/t Au over 64.90 m and 1.00 g/t Au over 16.60 m and 2.32 g/t Au over 4.05 m
- Follow up drilling at Vanha and testing selected scout drill targets planned for 2024
- Aurion is fully funded for all planned activities

ST. JOHN'S, NL, Sept. 9, 2024 /CNW/ - [Aurion Resources Ltd.](#) (TSXV: AU) (OTCQX: AIRRF) ("Aurion" or the "Company") announces results for nine holes from the 2024 drilling program at the Kaaresselkä area of its wholly owned Risti property in the Central Lapland Greenstone Belt in northern Finland.

Summary

- Gold mineralized system expanded in multiple directions at the Vanha prospect in the Kaaresselkä Area:
 - 29.10 g/t Au over 3.10 m from 20.10 m (KS24079), 100 m north of the Vanha Main trend
 - 3.35 g/t Au over 9.85 m from 259.75 m (KS24079), extending the mineralized system to depth by 50 m in the western part of the Vanha Main trend
 - 2.77 g/t Au over 9.00 m from 85.30 m and 2.32 g/t Au over 4.05 m from 114.05 m (KS24081), 3.92 g/t Au over 64.90 m (KS24080), extending the mineralized system 100 m towards west
 - 1.00 g/t Au over 16.60 m from 99.30 m (KS24076) in the eastern part of the mineralized system
 - Drilling continues to intersect broad zones of strongly deformed and hydrothermally altered rocks
 - Gold intersected over 600 m along strike and to 200 m depth at Vanha - open in all directions
- Follow up drilling at Vanha and testing selected scout drill targets planned for 2024
- Aurion is fully funded for all planned activities

Comments

"The potential for a significant mineralized system at Kaaresselkä continues to increase with each program. All six holes from the Vanha prospect (Kaaresselkä area) intersected gold, including intervals of 29.10 g/t Au over 3.10 m, 3.35 g/t Au over 9.85 m, 2.77 g/t Au over 9.00 m, and expanded the mineralized system in multiple directions," commented Matti Talikka, Aurion's President and CEO. "Aurion is fully funded for planned exploration activities including follow up drilling at Kaaresselkä and testing selected scout drill targets within our 100% owned Risti property."

Figures referenced in this release can be viewed at: <https://aurionresources.com/site/assets/files/1555/nr24-12figures.pdf>

Kaaresselkä Prospect

Aurion drilled nine holes, totaling 2,034.40 m, in the Kaaresselkä area. The holes targeted interpreted structural features and aim to identify and/or extend the gold mineralized system.

All six holes drilled at the Vanha prospect and reported in this press release intersected zones of gold mineralization. As a result of the recent results, the Vanha mineralized system is interpreted to extend 100 m towards west and deeper in the western part of the Vanha trend. In addition, high-grade mineralization was intersected at shallow depths 100 m north of the Vanha Main trend. Vanha holes intersected broad zones of strongly deformed and hydrothermally altered rocks associated with gold mineralization.

The gold mineralized system at Vanha is interpreted to extend over 600 m along strike and to at least 200 m depth. The mineralization is open along strike and at depth. Scout drill holes, which intersected gold up to 1.8 km to the west and 600 m to the east of the Vanha prospect (press release Nov 13, 2023), highlight the potential for an extensive gold mineralized system.

Kaaresselkä area.

The Kaaresselkä area is located 15 km east of the recent Vuoma discovery (28.64 g/t Au over 4.90 m) by Aurion-B2Gold, the mainly unexplored, structural corridor that extends over 25 km within Aurion's fully owned Risti property and the JV Aurion-B2Gold.

The gold mineralization at Vanha is mainly hosted by highly deformed and altered (silica, sericite, albite) mafic volcanic and metasedimentary rocks with minor to moderate amounts of fine-grained sulphide minerals including pyrite, pyrrhotite, chalcocite, galena, sphalerite and arsenopyrite in varying quantities. The higher-grade intervals are mainly hosted within silicified and brecciated zones with a moderate amount of sulphides. Elevated levels of base metals, including copper, were encountered in several holes.

The geologic setting and the style of mineralization at Kaaresselkä resembles several recent and past discoveries such as Vuoma (Aurion-B2Gold JV) and Ikkari (Rupert Resources) as well as the past producing Saattopora mine.

Vanha and Kaares Scout Drilling Summary

Hole ID	EOH (m)	Azimuth	Dip	From (m)	To (m)	Width (m)	Au (g/t)	Target Area

Drill hole descriptions

Scout hole KS24073 is located 1.3 km west of the Vanha area. The hole was drilled to the southeast and targeted geophysical features along the interpreted domain boundary. KS24073 did not intersect elevated gold (≥ 0.1 g/t) values.

Scout hole KS24074 is located 1.4 km west of the Vanha area and was collared on section 115 m northwest of KS24073. The hole was drilled to the southeast and targeted geophysical features along the interpreted domain boundary. KS24074 intersected several elevated gold (≥ 0.1 g/t) values including 0.48 g/t Au over 0.65 m from 72.00 m in a visible gold bearing quartz vein near the interpreted domain boundary.

Scout hole KS24075 is located 1.4 km southwest of the Vanha area. The hole was drilled to the northwest and targeted geophysical features. KS24075 did not intersect elevated gold (≥ 0.1 g/t) values.

Drill hole KS24076 is located in the eastern Vanha area and was collared 52 m north of KS23071. KS24076 intersected a mineralized interval of 1.00 g/t Au over 16.60 m from 99.30 m including 1.78 g/t Au over 7.70 m from 103.40 m. Other samples with elevated gold (≥ 0.1 g/t) were also intersected.

Drill hole KS24077 is located in the western Vanha area and was collared 40 m northeast of KS23035. KS24077 intersected several mineralized intervals such as 3.61 g/t Au over 1.10 m from 73.20 m and 1.36 g/t Au over 1.60 m from 187.05 m. Other samples with elevated gold (≥ 0.1 g/t) were also encountered.

Drill hole KS24078 is located in the western Vanha area and was collared 44 m northeast of KS23039. KS24078 intersected several mineralized intervals such as 0.45 g/t Au over 1.05 m from 212.05 m and 0.53 g/t Au over 3.30 m from 249.60 m. Other samples with elevated gold (≥ 0.1 g/t) were also encountered.

Drill hole KS24079 is located in the western Vanha area and was collared 43 m northeast of KS23070. KS24079 intersected several mineralized intervals such as 29.10 g/t Au over 3.10 m from 20.10 m, 2.80 g/t Au over 0.80 m from 237.80 m and 3.35 g/t Au over 9.85 m from 259.75 m including 18.15 g/t Au over 1.60 m from 268.00 m. Other samples with elevated gold (≥ 0.1 g/t) were also encountered. The intercept of 29.10 g/t Au over 3.10 m from 20.10 m is located approximately 100 m north of the Vanha Main trend. The intercept of 3.35 g/t Au over 9.85 m from 259.75 m is interpreted to extend the mineralized system 50 m deeper in the western part of the Vanha Main trend.

Drill hole KS24080 is located in the western Vanha area and targeted the interpreted domain boundary. KS24080 intersected numerous mineralized intervals such as 3.92 g/t Au over 5.65 m from 64.90 m including 12.50 g/t Au over 1.50 m from 66.40 m and 0.51 g/t Au over 10.35 m from 79.80 m. Other samples with elevated gold (≥ 0.1 g/t) were also encountered. The intercepts are located approximately 100 m west of previous intercepts at Vanha.

Drill hole KS24081 is located in the western Vanha area, was collared on section 69 m south of KS24080, and targeted the interpreted domain boundary. KS24081 intersected numerous mineralized intervals such as 0.52 g/t Au over 6.65 m from 22.45 m, 2.77 g/t Au over 9.00 m from 85.30 m including 20.40 g/t Au over 0.90 m from 87.30 m and 2.32 g/t Au over 4.05 m from 114.05 m including 8.19 g/t Au over 1.05 m from 117.05 m. Other samples with elevated gold (≥ 0.1 g/t) were also encountered. The intercepts are located approximately 100 m west of previous intercepts at Vanha.

Quality Assurance and Quality Control

All drill core samples were delivered to the ALS preparation facility in Sodankylä, Finland where sample preparation work was completed. All analytical work was completed at ALS facilities in Loughrea, Ireland and Rosia Montana, Romania. ALS is an internationally accredited lab and is ISO compliant (ISO 9001:2008, ISO/IEC 17025:2005). Samples were analyzed for gold using either the Au-AA26 procedure (50 g fire assay with AAS finish: Lower Detection Limit ("LDL") 0.01 g/t gold; Upper Detection Limit ("UDL") 100 g/t gold) or they were analyzed for gold, platinum and palladium using the PGM-ICP24 procedure (50 g fire assay with ICP-AES finish: LDL 0.001 g/t gold, 0.005 g/t platinum, 0.001 g/t palladium; UDL 10 g/t gold, 10 g/t platinum, 10 g/t palladium) or the PGM-ICP23 procedure (30 g fire assay with ICP-AES finish: LDL 0.001 g/t gold, 0.005 g/t platinum, 0.001 g/t palladium; UDL 10 g/t gold, 10 g/t platinum, 10 g/t palladium). Select samples were analyzed by Au-SCR24 1kg, Screen Fire Assay Au (0.05-1,000 ppm) by 1kg screen fire assay (50 g nominal sample weight). The sample pulp (1kg) is passed through a 100-micron stainless steel screen. Any material remaining on the screen (>100 micron) is retained and analyzed in its entirety by fire assay with gravimetric finish and reported as the Au (+) fraction. The material passing through the screen (<100 micron) is homogenized and two sub-samples are analyzed by fire assay with AAS finish. The average of the two AAS results is taken and reported as the Au (-) fraction result. All three values are used in calculating the combined gold content of the plus and minus fractions. The gold values for both the (+) 100 and (-) 100 micron fractions are reported together with the weight of each fraction as well as the calculated total gold content of the sample. Multi-element analysis (ME-ICP61, four-acid digestion, 35 element ICP-AES) was completed on all samples. Certified standards and blanks were inserted every 10 samples. ALS has its own QA/QC protocol using standards, blanks and duplicates.

About Aurion Resources Ltd.

Aurion Resources Ltd. (Aurion) is a well-funded, Canadian exploration company listed on the TSX Venture Exchange (TSX-V: AU) and the OTCQX Best Market (OTCQX: AIRRF). Aurion's strategy is to generate or acquire early-stage precious metals exploration opportunities and advance them through direct exploration by our experienced team or by business partnerships and joint venture arrangements. Aurion's current focus is exploring on its Risti project, as well as advancing its joint venture properties with [B2Gold Corp.](#) and Kinross Gold in Finland.

On behalf of the Board of Directors,
Matti Talikka, CEO

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
