

# Indigo Completes Phase 1 Drilling on its Uranium Project in Shirley Basin, Wyoming

16.01.2025 | [Newsfile](#)

Vancouver, January 16, 2025 - [Indigo Exploration Inc.](#) (TSXV: IXI) (OTCQB: IXIXF) (FSE: INEN) (the "Company") is pleased to announce that it has completed 48 of a planned 50-hole drill program on its highly prospective uranium project located in the past producing Shirley Basin of Wyoming. The Hot Property covers a 5.75 km<sup>2</sup> (2.2 miles<sup>2</sup>) area of the Basin and has seen over 200 uranium exploration holes completed between 1957 and 1975. The Project is located adjacent to [Uranium Energy Corp.](#)'s (NYSE: UEC) Shirley Basin project, Ur-Energy Inc.'s (NYSE: URG) Shirley Basin mine, and [Nuclear Fuels Inc.](#)'s (CSE: NF) Bobcat Uranium Project. Ur-Energy's Shirley Basin project hosts an NI 43-101 Measured and Indicated Resource of 8.8 Mlb U<sub>3</sub>O<sub>8</sub> grading 0.23%<sup>1</sup> currently under construction<sup>2</sup>.

The Phase 1 drill campaign on its 100% owned Hot Property systematically explored the southern part of the property, where favourable historic intercepts were encountered in the top 53 metres (175 feet) from surface, as well as areas that have never been drilled before. Holes were spaced roughly every 160 metres (525 feet) apart with the aim to characterize the thickness and grade of uranium mineralization through downhole gamma ray geophysical logging and develop a stratigraphic framework to broadly model the continuity and configuration of near surface potentially multiple uranium roll fronts. Results are pending.
