

# Super Copper Corp. Announces Phase 2 Exploration Program at Flagship Project in Chile

10.06.2025 | [CNW](#)

## Ground Geophysics, Historical Core Sampling, and Surface Channel Rock Sampling Work Planned Across High-Priority Targets

[Super Copper Corp.](#) (CSE: CUPR) (OTCQB: CUPPF) (FSE: N60) ("Super Copper" or the "Company"), is pleased to announce its Phase 2 exploration program at the Cordillera Cobre Project, located in Chile's Coastal IOCG belt.

This next phase of work follows the success of the Company's initial property-wide surface program, which confirmed widespread, high-grade copper mineralization at surface. Notably, 46 rock grab samples returned assays above 1% copper (Cu), including 11 samples exceeding 5% Cu, with a peak result of 10.3% Cu (see news release dated February 18, 2025. Note, by their nature, that surface samples are selective and may not represent underlying mineralization.)

Phase 2 is designed to advance the Company's understanding of its highest-priority copper targets and establish a data-driven foundation for an inaugural drill program. The program includes detailed ground geophysical surveys, sampling of historical core, and systematic channel sampling across key mineralized zones.

### High Priority Copper Targets:

The Company has identified the primary target areas of the Cordillera Cobre Project for the Phase 2 work:

- El Alto
- Calcite Hill

These areas returned consistent high-grade copper values and feature visible oxide mineralization, including malachite, tenorite, chalcocite, and bornite, with potential for sulfide mineralization at depth. The Company also identified legacy mine workings and underground shafts, including those at Mina Anima, as well as historical drill collars and available core at El Alto, which will be verified and re-sampled as part of the Phase 2 program. A few secondary targets that returned high grade copper values such as the Copper Tuffs and Eastern Mine may also see follow-up sampling during the Phase 2 program.

### Phase 2 Exploration Program

The program is anticipated to include:

1. Induced Polarization (IP) Geophysics - IP surveys targeting El Alto and Calcite Hill to identify chargeability anomalies potentially associated with deeper sulfide zones.
2. Ground Magnetometry Survey - Covering Calcite Hill and surrounding zones to delineate structural controls and magnetic anomalies.
3. Core Sampling & Verification - Systematic sampling of unsampled historical core from El Alto to confirm past observations and guide future drilling.
4. Channel Sampling & Prospecting - Focused work at Mina Anima, Calcite Hill outcrops and mine workings, and new targets in the northwest area of the property.

Zachary Dolesky, CEO of Super Copper, stated: "This is a pivotal step in our growth, transitioning from compelling surface data to defining drill-ready targets. With multiple corporate milestones complete, we've

eliminated distractions and are laser-focused on the rocks. Backed by a new strategic shareholder and an expanded network, Super Copper is excited to execute its Phase 2 program and keep building its platform."

### Phase 3 and Additional Exploration

Upon completion of Phase 2 and subject to the Company obtaining additional financing, the Company aims to launch a Phase 3 program focused on drilling high-priority targets identified through the current work provided Phase 2 results warrant further exploration. The northwest portion of the property remains underexplored and will be further assessed for future expansion potential.

### Timeline

Super Copper is working closely with its geological team, consultants, technology providers, and execution partners to finalize Phase 2 scheduling. An update will be issued once the program is complete, with results expected in the second half of 2025.

### About Super Copper Corp.

Super Copper is a mining exploration company focused on the acquisition, exploration and development of copper and precious metal projects. It is currently developing its joint venture in a prospective Chilean copper property located within the copper-rich Venado Formation in the province of Atacama, Northern Chile, a region with world-class infrastructure and the presence of global majors. | [www.supercopper.com](http://www.supercopper.com)

### Forward-Looking Statements

This news release contains forward-looking statements and information within the meaning of applicable securities laws (collectively, "forward-looking statements"). Forward-looking statements relate to future events or performance and include statements regarding, but not limited to: the scope and components of the Phase 2 exploration program at the Cordillera Cobre Project; the timing and results of exploration activities; the identification and prioritization of drill targets; the anticipated commencement of a Phase 3 drill program; the Company obtaining additional financing to fund exploration activities, the geological potential of identified targets; and the Company's strategic plans, growth trajectory, and positioning within the copper sector.

Forward-looking statements are based on management's current expectations, beliefs, and assumptions, and are subject to known and unknown risks, uncertainties, and other factors that may cause actual results to differ materially from those expressed or implied. Such risks include, without limitation: delays or unforeseen challenges in exploration execution; results of sampling and geophysics not meeting expectations; inaccuracies in geological interpretations; inability to secure permits, financing, or equipment; fluctuations in commodity prices and market demand; and regulatory or geopolitical developments in the jurisdictions where the Company operates.

The use of words such as "plans," "expects," "intends," "anticipates," "believes," "may," "will," "should," "potential," "aims" and similar terminology often identifies forward-looking statements, although not all forward-looking statements include these words.

Readers are cautioned not to place undue reliance on forward-looking statements. Although the Company believes the assumptions underlying these statements are reasonable, there can be no assurance they will prove to be accurate. Except as required by law, the Company undertakes no obligation to update or revise

any forward-looking statements, whether as a result of new information, future events, or otherwise.

Investors are encouraged to consult the Company's public filings available on SEDAR+ for a comprehensive discussion of risk factors relevant to its business and operations.
