

WestKam Gold Corp. Mobilizes Crews for Prospecting and Soil Sampling on Will Property, Mt. Williams, B.C.

31.07.2025 | [GlobeNewswire](#)

Vancouver, July 31, 2025 - [WestKam Gold Corp.](#) (the "Company" or "WestKam") is pleased to announce that field crews are being mobilized to commence a prospecting and soil sampling program on the Company's 100%-owned Will Project, located on Mt. Williams near Goldbridge, British Columbia.

The Will Project encompasses 1,142.47 hectares of highly prospective terrain and is in good standing through January 30, 2027. The 2025 exploration campaign will focus on a zone of listwanite alteration in the upper reaches of Mt. Williams, an area with geological characteristics conducive to gold and antimony mineralization.

The targeted alteration zone is situated on trend with the Minto-Olympic shear zone, currently being advanced by [Endurance Gold Corp.](#), and is interpreted to share a similar structural and lithological setting. Listwanite-hosted orogenic systems are globally recognized for their association with significant gold deposits. Antimony is commonly associated in such settings-particularly in structurally controlled quartz-carbonate veining in proximity to ultramafic rocks.

The program will include systematic soil sampling, geological mapping and prospecting, aimed at delineating geochemical anomalies and identifying potential drill targets within the target area shown on Figure #1.

Peter Laipnieks, President commented: "We are excited to initiate more work on the Will Project, which represents a compelling opportunity for discovery. The combination of listwanite alteration, favorable structural setting, and the potential for both gold and antimony mineralization positions this property as a high-priority exploration target for WestKam."

WestKam remains committed to responsible exploration practices and ongoing collaboration with local communities and stakeholders as operations advance on Mt. Williams.
