"All of the equipment has now been on site for the past few weeks. Operational testing has been carried out-not directly at the target location, but nearby on the property-and everything is performing well. The equipment is now being set up at the initial start point, with only fine-tuning and adjustments on the drill head remaining. Drilling will soon commence, marking the start of the bulk sample," states Mr. Anderson, CEO.

Novamera has set up Surgical Mining™ equipment at the JMZ bulk sample site and is currently conducting control system testing / commissioning. This involves testing sensors, gyro and electronics that steer the course correction device which is Novamera's standard in-field commissioning. The bulk sample will total up to 1000 cubic meters (approximately 2,700 tonnes).

Site under preparation
