

USCM Announces Extension of Option Agreement for McDermitt East Lithium Project Amid Government Interest in Thacker Pass

25.09.2025 | [Newsfile](#)

Vancouver, September 25, 2025 - [US Critical Metals Corp.](#) (CSE: USCM) (OTCQB: USCMF) (FSE: 0IU) ("USCM" or the "Company") is pleased to announce that it has received a six-month extension (the "Extension") to satisfy its obligations that were due on the second year anniversary of the Option and Exploration Agreement (the "Agreement") for the McDermitt Lithium East Project ("McDermitt East" or the "Project"), located on the eastern margin of the McDermitt Caldera in Nevada. The Agreement provides the Company with the option to acquire up to a 50% interest in the Project and a further option to acquire an additional 25% interest for an aggregate total of 75% interest in the Project (reference full transaction details, [here](#)). In consideration for the Extension, USCM will issue an additional 167,000 common shares to [LIVE Energy Minerals Corp.](#) ("LIVE") pursuant to the terms of the Extension. The shares are being issued at a deemed value of \$0.30. All common shares will be subject to a statutory 4-month hold period. Closing of the Extension is subject to acceptance of the Extension by the Canadian Securities Exchange (the "CSE").

This development comes as the Trump administration has signaled strong federal backing for U.S. lithium production, including discussions to acquire an equity stake in Lithium Americas as part of loan revisions to support the Thacker Pass project-the largest known lithium deposit in North America.¹

USCM previously reported sampling results of up to 2,129 ppm lithium at McDermitt East, underscoring the Project's potential as part of a strategically vital U.S. lithium district (reference full press release, [here](#)).

Darren Collins, CEO of USCM, commented: "The extension for McDermitt East ensures we maintain a strong foothold in one of the most prospective lithium regions in the U.S. In addition, the U.S. federal interest in Thacker Pass validates the significance of this district, and we believe our asset positions will deliver meaningful long-term value for shareholders."

Project Overview

The Project is located within the McDermitt Caldera, an extinct 40x30 km super-volcano formed approximately 16.3 million years ago (Ma) as part of a hotspot currently underneath the Yellowstone Plateau. Following an initial eruption and concurrent collapse of the McDermitt Caldera, a large lake formed in the caldera basin. This lake water was extremely enriched in lithium and resulted in the accumulation of lithium-rich clays.

Late volcanic activity uplifted the caldera, draining the lake and bringing the lithium-rich moat sediments to the surface resulting in the near-surface lithium present on the Project. The McDermitt Caldera is potentially one of the largest sources of lithium clays in the world and hosts some of the largest lithium deposits in the USA including the Tacker Pass project in the south portion of the Caldera.

LIVE completed a technical report in accordance with National Instrument 43-101 on the Project entitled "43-101 Technical Report on McDermitt Lithium East Property prepared by John Michael William Collins, P. Geo.," effective date December 16, 2022" (the "Technical Report") which indicates high potential for the project to host large amounts of lithium bearing sediments. The Technical Report can be found under LIVE's SEDAR+ profile at www.sedarplus.ca.

About US Critical Metals Corp.

USCM is focused on mining projects that will further secure the U.S. supply of critical metals and rare earth elements, which are essential to fueling the new age economy. Pursuant to option agreements with private Canadian and American companies, USCM's assets consist of three agreements, each providing USCM with the right to acquire interests in four discovery focused projects in the U.S. These projects include the Clayton Ridge Lithium Property located in Nevada, the Haynes Cobalt Property located in Idaho, the Sheep Creek located in Montana, and Lemhi Pass located in Idaho. A significant percentage of the world's critical metal and rare earth supply comes from nations with interests that are contrary to those of the U.S. USCM intends to explore and develop critical metals and rare earth assets with near- and long-term strategic value to the advancement of U.S. interests.

Disclaimer for Forward-Looking Information

This news release contains certain information that may be deemed "forward-looking information" with respect to USCM within the meaning of applicable securities laws. Such forward-looking information involves known and unknown risks, uncertainties and other factors that may cause USCM's actual results, performance or achievements, or developments in the industry to differ materially from the anticipated results, performance or achievements expressed or implied by such forward-looking information. Forward-looking information includes statements that are not historical facts and are generally, but not always, identified by the words "expects", "plans", "anticipates", "believes", "intends", "estimates", "projects", "potential" and similar expressions, or that events or conditions "will", "would", "may", "could" or "should" occur. Forward-looking information contained in this press release may include, without limitation, closing of the Extension and issuance of the related shares, acceptance of the CSE of the Extension, exploration plans and expected exploration and drilling results at the McDermitt East, results of operations, and the expected financial performance of the Company. Although USCM believes the forward-looking information contained in this news release is reasonable based on information available on the date hereof, by its nature, forward-looking information involves assumptions and known and unknown risks, uncertainties and other factors which may cause our actual results, level of activity, performance or achievements, or other future events, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking information.

Examples of such assumptions, risks and uncertainties include, without limitation, assumptions, risks and uncertainties associated with general economic conditions; adverse industry events; the receipt of required regulatory approvals and the timing of such approvals; that USCM maintains good relationships with the communities in which it operates or proposes to operate; future legislative and regulatory developments in the mining sector; USCM's ability to access sufficient capital from internal and external sources, and/or inability to access sufficient capital on favorable terms; mining industry and markets in Canada and generally; the ability of USCM to implement its business strategies; competition; the risk that any of the assumptions prove not to be valid or reliable, which could result in delays, or cessation in planned work; risks

associated with the interpretation of data, the geology, grade and continuity of mineral deposits; the possibility that results will not be consistent with USCM's expectations; as well as other assumptions, risks and uncertainties applicable to mineral exploration and development activities and to USCM, including as set forth in the USCM's public disclosure documents filed on the SEDAR+ website at www.sedarplus.ca.

The forward-looking information contained in this press release represents the expectations of USCM as of the date of this press release and, accordingly, is subject to change after such date. Readers should not place undue importance on forward-looking information and should not rely upon this information as of any other date. While USCM may elect to, it does not undertake to update this information at any particular time except as required in accordance with applicable laws.
