

# Fall Fieldwork Underway at Gold Finder's West Madsen Gold Project in Red Lake, Ontario

29.10.2025 | [Newsfile](#)

West Madsen adjoins West Red Lake Gold Mines' Madsen Gold Mine, where production was restarted in June

Vancouver, October 29, 2025 - [Gold Finder Resources Ltd.](#) (TSXV: GLD) (OTCQB: GLDFF) ("Gold Finder" or the "Company") is pleased to announce the mobilization of a field crew to its 100%-owned West Madsen Gold Property. The fall field program will consist of prospecting and soil sampling and is designed to follow up on positive geochemical results obtained from this summer's field program, announced by Gold Finder on September 9, 2025.

Figure 1: Showing West Madsen Block A with the summer 2025 target areas and analytical results.

Results from the 2025 summer field program, as well as the 2024 drill program, suggest that the key Balmer-Confederation contact may be located further south than previously thought in the eastern and western parts of the Property, and the current field program will test this theory.

"We're excited to get back on the ground at West Madsen and further investigate the new gold anomalies identified during our summer program," said Greg Lytle, President of Gold Finder. "These anomalies are instrumental to our continued effort to delineate gold zones of interest along our prospective 8-kilometer trend adjoining the Madsen Gold Mine property, where we have previously identified the key Balmer-Confederation contact. Tracing out this contact zone is a primary goal of the current program."

West Madsen Property

Gold Finder owns a 100% interest in the West Madsen property (the "Property"), which was originally acquired from Great Bear Resources, and now covers 5,936 hectares (see claims map) in the heart of the Red Lake Gold Camp. The Property adjoins the Madsen Mine property to the east (see drone image above), owned by West Red Lake Gold Mines ('WRLG'), where WRLG recently reported the intersection of a high-grade gold lens in diamond drilling of its Lower Main Austin Zone at its Madsen Mine. Adjoining the western part of the Property is Athena Gold's Laird Lake property, where Athena recently delineated till geochemical targets and geophysical targets. These results on either side of the Property are encouraging but do not necessarily indicate that similar conditions exist on the Property.

The bulk of the mineral resources on the Madsen Mine property are hosted in a ~7-km-long gold trend that follows the major crustal break or contact between the Balmer and Confederation assemblages. Gold Finder has observed the same Balmer-Confederation contact in outcrop approximately 1.5 km west of the Block A eastern boundary and identified it within an ~8-km corridor of disrupted regional magnetics that traverses Block A from the Madsen Mine property.
