

# Fortuna Mining Corp. intersects 7.3 g/t Au over 16.1 m and defines second underground shoot at Sunbird, Séguéla Mine, Côte d'Ivoire

30.10.2025 | [GlobeNewswire](#)

[Fortuna Mining Corp.](#) (NYSE: FSM | TSX: FVI) is pleased to report results from ongoing exploration drilling at the Sunbird Deposit, located at the Séguéla Mine in Côte d'Ivoire. Recent drilling has successfully extended high grade mineralization at depth and confirmed the development of a second underground shoot, further supporting the potential for resource growth and mine life extension.

Paul Weedon, Senior Vice President of Exploration at Fortuna, commented, "Drilling at Sunbird has been very successful in expanding the underground potential, with the deepest holes to date intersecting multiple high grade intervals, including 5.2 g/t Au over an estimated true width of 6.3 meters from 787 meters in drill hole SGRD2460. This result extends the central mineralized zone a further 150 meters down plunge, where it remains open." Mr. Weedon continued, "Drilling has also been very successful in extending the lower shoot a further 200 meters down plunge, with highlights including 6.0 g/t over an estimated true width of 11.9 meters in drill hole SGRD2461 from 669 meters, the deepest hole completed on this shoot to date, where it also remains open." Mr. Weedon concluded, "With over 1.5 kilometers of high grade strike now defined below Sunbird, we have initiated an underground study while five drill rigs continue to advance drilling aimed at expanding the mineralized envelope and testing its full extent."

## Sunbird Deposit Drilling Highlights

SGRD2434:	7.3 g/t Au over an estimated true width of 16.1 meters from 688 meters, including 19.2 g/t Au over an estimated true width of 1.4 meters from 688 meters, and 57.9 g/t Au over an estimated true width of 0.7 meters from 702 meters, and 17.5 g/t Au over an estimated true width of 0.7 meters from 706 meters
SGRD2444:	8.3 g/t Au over an estimated true width of 11.9 meters from 448 meters
SGRD2452:	9.0 g/t Au over an estimated true width of 5.6 meters from 658 meters, including 14.7 g/t Au over an estimated true width of 0.7 meters from 660 meters, and 25.0 g/t Au over an estimated true width of 1.4 meters from 664 meters
SGRD2455:	9.5 g/t Au over an estimated true width of 5.6 meters from 719 meters, including 28.5 g/t Au over an estimated true width of 1.4 meters from 720 meters
SGRD2461:	6.0 g/t Au over an estimated true width of 11.9 meters from 669 meters, including 14.5 g/t Au over an estimated true width of 0.7 meters from 669 meters, and 22.3 g/t Au over an estimated true width of 0.7 meters from 678 meters, and 20.1 g/t Au over an estimated true width of 0.7 meters from 681 meters
SGRD2470:	15.6 g/t Au over an estimated true width of 5.6 meters from 483 meters, including 28.8 g/t Au over an estimated true width of 0.7 meters from 484 meters, and 29.6 g/t Au over an estimated true width of 1.4 meters from 487 meters
SGRD2471:	6.0 g/t Au over an estimated true width of 9.8 meters from 378 meters, including 21.6 g/t Au over an estimated true width of 1.4 meters from 382 meters

A further 40 drill holes, totaling 15,088 meters, have been completed at Sunbird (see Figure 1) as part of the underground resource confidence infill and extension program (see Figure 2). The objectives of the program are twofold: first, to infill and upgrade resource confidence to support the ongoing underground mining study; and second, to extend and expand mineralization a further 400 meters down plunge to the south.

Drilling on the main shoot continues to intersect high grades along the projected plunge, with drill-defined mineralization now extending more than 1.3 kilometers down plunge, approximately 700 meters below surface. Results include 5.2 g/t Au over an estimated true width of 6.3 meters from 787 meters and 5.4 g/t Au over an estimated true width of 4.9 meters from 802 meters in drill hole SGRD2460.

Recent intersections such as 6.0 g/t Au over an estimated true width of 11.9 meters from 669 meters in drill hole SGRD2461 and 13.3 g/t Au over an estimate true width of 3.5 meters from 786 meters in drill hole SGRD2467, highlight the strengthening of a second high grade shoot extending at least 900 meters down plunge from the pit base.

Mineralization remains open at depth and along strike, with drilling to continue through the end of 2025.

Refer to Appendix 1 for full details of the drill holes and assay results for this drill program.

#### Quality Assurance & Quality Control (QA - QC)

All drilling data completed by the Company utilized the following procedures and methodologies, and all drilling was carried out under the supervision of the Company's personnel.

All reverse circulation (RC) drilling used a 5.25-inch face-sampling pneumatic hammer with samples collected into 60-liter plastic bags. Samples were kept dry by maintaining sufficient air pressure to prevent groundwater inflow. Where water ingress exceeded air pressure, RC drilling was stopped, and drilling converted to diamond core tails. Once collected, RC samples were riffle split through a three-tier splitter to yield a 12.5 percent representative sample for submission to the analytical laboratory. The remaining 87.5% portion was stored at the drill site until assay results were received and validated. Coarse reject samples corresponding to all significant mineralized samples intervals are retained and stored on-site at the Company-controlled core yard.

All diamond drilling (DD) drill holes started with HQ-sized diameter core before reducing to NQ diameter upon intersecting fresh rock. Core was logged and marked for sampling in standard one-meter intervals or to geological boundaries. Samples were then cut into equal halves using a diamond saw. One half of the core was retained in the original core box and stored in a secure location at the Company's core yard, while the other half was sampled, placed in sealed bags, and securely stored at site until shipment.

All RC and DD samples were transported by Company vehicle or commercial courier to either the ALS Global preparation laboratory in Yamoussoukro, Cote d'Ivoire, or the Bureau Veritas preparation and analytical laboratory in Abidjan, Cote d'Ivoire. Sample pulps prepared by ALS Global were subsequently shipped via commercial courier to ALS's facility in Ouagadougou, Burkina Faso. Routine gold analysis using a 50-gram charge and fire assay with an atomic absorption finish was completed for all samples at either ALS's Ouagadougou laboratory or Bureau Veritas' laboratory in Abidjan. Samples returning assays greater than 10 parts per million of gold were reanalyzed using a 50-gram charge and fire assay with a gravimetric finish.

Quality control procedures included the systematic insertion of blanks, duplicates, and certified reference standards into the sample stream. In addition, both ALS and Bureau Veritas laboratories inserted their own quality control samples to ensure analytical accuracy and precision.

#### Qualified Person

Paul Weedon, Senior Vice President, Exploration for Fortuna Mining Corp., is a Qualified Person as defined

by National Instrument 43-101 and is a member of the Australian Institute of Geoscientists (Membership No. 6001). Mr. Weedon has reviewed and approved the scientific and technical information contained in this news release. He has verified the data disclosed, including the sampling, analytical, and test data underlying the information or opinions contained herein, by reviewing geochemical and geological databases and inspecting diamond drill core. There were no limitations to the verification process.

About Fortuna Mining Corp.

Fortuna Mining Corp. is a Canadian precious metals mining company with three operating mines and a portfolio of exploration projects in Argentina, Côte d'Ivoire, Mexico, and Peru, as well as the Diamba Sud Gold Project in Senegal. Sustainability is at the core of our operations and stakeholder relationships. We produce gold and silver while creating long-term shared value through efficient production, environmental stewardship, and social responsibility. For more information, please visit our website at [www.fortunamining.com](http://www.fortunamining.com)

ON BEHALF OF THE BOARD

Jorge A. Ganoza  
President, CEO, and Director  
Fortuna Mining Corp.

#### *Forward-looking Statements*

*This news release contains forward-looking statements which constitute "forward-looking information" within the meaning of applicable Canadian securities legislation and "forward-looking statements" within the meaning of the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995 (collectively, "Forward-looking Statements"). All statements included herein, other than statements of historical fact, are Forward-looking Statements and are subject to a variety of known and unknown risks and uncertainties which could cause actual events or results to differ materially from those reflected in the Forward-looking Statements. The Forward-looking Statements in this news release may include, without limitation, the Company's proposed exploration plans and objectives at the Sunbird Deposit; statements regarding the potential for resource growth and mine life extension as well as expanding the underground potential; statements about the Company's business strategies, plans and outlook; the Company's plans for its mines and mineral properties; changes in general economic conditions and financial markets; the impact of inflationary pressures on the Company's business and operations; the future results of exploration activities; expectations with respect to metal grade estimates and the impact of any variations relative to metals grades experienced; assumed and future metal prices; the merit of the Company's mines and mineral properties; and the future financial or operating performance of the Company. Often, but not always, these Forward-looking Statements can be identified by the use of words such as "estimated", "potential", "open", "future", "assumed", "projected", "proposed", "used", "detailed", "has been", "gain", "planned", "reflecting", "will", "anticipated", "estimated" "containing", "remaining", "to be", or statements that events, "could" or "should" occur or be achieved and similar expressions, including negative variations.*

*Forward-looking Statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance, or achievements of the Company to be materially different from any results, performance or achievements expressed or implied by the Forward-looking Statements. Such uncertainties and factors include, among others, operational risks associated with mining and mineral processing; uncertainty relating to Mineral Resource and Mineral Reserve estimates; uncertainty relating to capital and operating costs, production schedules and economic returns; risks relating to the Company's ability to replace its Mineral Reserves; risks related to the conversion of Mineral Resources to Mineral Reserves; risks associated with mineral exploration and project development; uncertainty relating to the repatriation of funds as a result of currency controls; environmental matters including obtaining or renewing environmental permits and potential liability claims; uncertainty relating to nature and climate conditions; laws and regulations regarding the protection of the environment (including greenhouse gas emission reduction and other decarbonization requirements and the uncertainty surrounding the interpretation of omnibus Bill C-59 and the related amendments to the Competition Act (Canada)); risks associated with political instability*

and changes to the regulations governing the Company's business operations; changes in national and local government legislation, taxation, controls, regulations and political or economic developments in countries in which the Company does or may carry on business; risks associated with war, hostilities or other conflicts, such as the Ukrainian - Russian, and Israeli - Hamas conflicts, and the impacts they may have on global economic activity; risks relating to the termination of the Company's mining concessions in certain circumstances; developing and maintaining relationships with local communities and stakeholders; risks associated with losing control of public perception as a result of social media and other web-based applications; potential opposition to the Company's exploration, development and operational activities; risks related to the Company's ability to obtain adequate financing for planned exploration and development activities; property title matters; risks related to the ability to retain or extend title to the Company's mineral properties; risks relating to the integration of businesses and assets acquired by the Company; impairments; risks associated with climate change legislation; reliance on key personnel; adequacy of insurance coverage; operational safety and security risks; legal proceedings and potential legal proceedings; uncertainties relating to general economic conditions; risks relating to a global pandemic, which could impact the Company's business, operations, financial condition and share price; competition; fluctuations in metal prices; risks associated with entering into commodity forward and option contracts for base metals production; fluctuations in currency exchange rates and interest rates; tax audits and reassessments; risks related to hedging; uncertainty relating to concentrate treatment charges and transportation costs; sufficiency of monies allotted by the Company for land reclamation; risks associated with dependence upon information technology systems, which are subject to disruption, damage, failure and risks with implementation and integration; labor relations issues; as well as those factors discussed under "Risk Factors" in the Company's Annual Information Form for the fiscal year ended December 31, 2024. Although the Company has attempted to identify important factors that could cause actual actions, events, or results to differ materially from those described in Forward-looking Statements, there may be other factors that cause actions, events or results to differ from those anticipated, estimated or intended.

Forward-looking Statements contained herein are based on the assumptions, beliefs, expectations and opinions of management, including, but not limited to, the accuracy of the Company's current Mineral Resource and Mineral Reserve estimates; that the Company's activities will be conducted in accordance with the Company's public statements and stated goals; that there will be no material adverse change affecting the Company, its properties or its production estimates (which assume accuracy of projected ore grade, mining rates, recovery timing, and recovery rate estimates and may be impacted by unscheduled maintenance, labor and contractor availability and other operating or technical difficulties); the duration and effect of global and local inflation; the duration and impacts of geo-political uncertainties on the Company's production, workforce, business, operations and financial condition; the expected trends in mineral prices, inflation and currency exchange rates; that all required approvals and permits will be obtained for the Company's business and operations on acceptable terms; that there will be no significant disruptions affecting the Company's operations and such other assumptions as set out herein. Forward-looking Statements are made as of the date hereof and the Company disclaims any obligation to update any Forward-looking Statements, whether as a result of new information, future events, or results or otherwise, except as required by law. There can be no assurance that these Forward-looking Statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, investors should not place undue reliance on Forward-looking Statements.

#### Cautionary Note to United States Investors Concerning Estimates of Reserves and Resources

All reserve and resource estimates included in this news release have been prepared in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects ("NI 43-101") and the Canadian Institute of Mining, Metallurgy, and Petroleum Definition Standards on Mineral Resources and Mineral Reserves. NI 43-101 is a rule developed by the Canadian Securities Administrators that establishes standards for public disclosure by a Canadian company of scientific and technical information concerning mineral projects. All Mineral Reserve and Mineral Resource estimates contained in the technical disclosure have been prepared in accordance with NI 43-101 and the Canadian Institute of Mining, Metallurgy and Petroleum Definition Standards on Mineral Resources and Reserves. Canadian standards, including NI 43-101, differ significantly from the requirements of the Securities and Exchange Commission, and mineral reserve and resource information included in this news release may not be comparable to similar information disclosed by U.S. companies.
