Central Petroleum Limited: Quarterly Activities Report

30.10.2025 | ABN Newswire

Brisbane, Australia - Central Petroleum Ltd. (ASX:CTP) (FRA:C9J) (OTCMKTS:CNPTF) announced the Activities Report for the September quarter 2025.

- Sales volumes of 1.1 PJe (Petajoule equivalent) were 4.5% lower than the June quarter, reflecting lower seasonal demand, temporary pipeline pressure restrictions and partial oil offtake constraints.
- Unit sales prices: the average realised delivered price across the portfolio was \$10.15 / GJe (Gigajoule equivalent) for the September quarter, 28% higher than the same quarter last year, but slightly lower than the June quarter due a different mix of gas delivery points when the Northern Gas Pipeline was closed, and softer oil prices.
- Sales revenue of \$11.2m for the September quarter was 6.6% lower than the record high June quarter, driven by the lower sales volumes and sales prices. Contracted take-or-pay provisions provide some protection for cash flows, with an additional \$0.5m arising in respect of take-or-pay volumes not taken in the quarter.
- Operating cash inflows of \$0.6m (\$1.8m before net interest and exploration costs) were impacted by the lower sales revenues, a catch-up of \$2.8m of overlift gas payments accrued since February, and Central's share of annual staff incentive payments (net of JV recoveries), including the cash-settlement of share rights.
- Cash balance at the end of the quarter was \$26.7m, down from \$27.5m at 30 June. Key cash flows included:
- o Net operating inflows of \$1.8m (before net interest and exploration);
- o CAPEX of \$1.0m;
- o Exploration related expenditures of \$0.8m, including the finalisation of necessary rehabilitation and remediation works in the Southern Georgina Basin and preparation for seismic acquisition in EP115; and
- o Net interest payments of \$0.5 million.
- Net cash was \$3.3 million at 30 September, including \$2.5 million of funds held as security for the loan facility.
- Reserves upgrade: the outperformance of the new Mereenie production wells resulted in a 9% increase (before production) in 2P oil and gas reserves at Mereenie at 30 June, effectively replacing 178% of Mereenie's FY2025 production.

Dingo 1P gas reserves were upgraded by 6% before production, following new reservoir modelling. These reserve upgrades effectively replaced 98% of FY2025 production across Central's portfolio on a 1P basis, and 96% on a 2P basis.

- Share buy-back: opened an on-market share buy-back program, Central's first shareholder returns. To date, Central has not been able to purchase shares onmarket due to ASX trading constraints.
- New Gas Sales Agreement: In October, Central secured a new Gas Sale Agreement (GSA) to supply 1.3 PJ (Central share) of gas over two years from 31 December 2025. The new GSA is for firm supply at a fixed price, with take-or-pay provisions, providing increased cash flow certainty.
