

# Great Atlantic Resources Corp. Begins New and Additional Sampling of Drill Core - Previous Samples

31.10.2025 | [Newsfile](#)

**Included 1,158 g/t Silver, 9.04% Zinc, and 9.19% Copper over 3 Meters at Its 100% Owned Keymet Precious Metal - Base Metal Property, Northeast New Brunswick**

[Great Atlantic Resources Corp.](#) (TSXV: GR) (the "Company" or "Great Atlantic") is pleased to announce it has begun a program of additional sampling of drill core from the 2021 diamond drilling program at its 100% owned Keymet Precious Metal - Base Metal Property, located in northeast New Brunswick.

Massive Sulfides in Drill Hole Ky-18-14: 9.04% zinc, 9.19% copper and 1,158 g/t silver (3.00 meters core length)

The 2021 diamond drilling program was conducted in the area of the Elmtree 12 polymetallic vein system (northwest of the historic Keymet Mine), which hosts high grade silver, zinc and copper. Gold mineralization also occurs locally in this area associated with arsenopyrite.

The core sampling will include intervals with arsenopyrite mineralization for gold analysis and intervals with base metal sulfide mineralization for base metal and silver analysis. The Elmtree 12 vein system includes local high-grade veins, including a 2018 drill intercept (hole Ky-18-14) of 1,158 grams / tonne (g/t) silver, 9.04% zinc and 9.19% copper over 3.00 meters core length.

The 2021 drilling program, conducted within the northwest region of the Keymet Property, consisted of ten holes (2,661 total meters) testing numerous targets northwest of the historic Keymet Base Metal - Silver Mine. The 2021 drilling program, as with the 2015, 2017 and 2018 drilling programs (see Company news releases for results of 2015, 2017 and 2018 drilling programs), targeted the area of the Elmtree 12 polymetallic vein system and nearby target areas.

Twenty-two core samples from the first five 2021 drill holes (Ky-21-23 to Ky-21-27) were analysed during early 2022 with intercepts (core length) including (see Company News Release of April 20<sup>th</sup>, 2022):

- Ky-21-25: 31.60 - 32.23 meters (0.63m): 1.53 g/t gold and 74.25 - 74.95 meters (0.70m): 3.17 g/t gold
- Ky-21-27: 102.64 - 103.56 meters (0.92): 3.50% zinc, 3.26% lead, 0.36% copper and 48.8 g/t silver

The gold bearing intercepts of hole Ky-21-25 represent a new gold discovery for the Company referred to as the Debler Zone. Both gold bearing intercepts in this hole contain arsenopyrite mineralization. Hole Ky-21-27 tested the southern part of the Elmtree 12 vein polymetallic vein system.

Ky-21-25 (Debler Zone): 3.17 g/t Au over 0.70 meters (core length)

Previous sampling and analysis of the 2021 drill core was very limited with only 22 drill core samples being

submitted for analysis during 2022. Intervals of unsampled 2021 drill core have been selected for additional sampling / analysis. One objective of this drill core sampling program is to analyze intervals with arsenopyrite for gold. Another objective is to analyze veins / veined zones with base metal sulfides for base metals and silver (such samples will also be analyzed for gold and a wide range of metals).

Semi-massive sulfides in veins within hole Ky-21-28 (unsampled)

For example, the interval in hole Ky-21-23 at 175.21-175.96 meters contains a veined zone with semi-massive sphalerite and galena that has not been sampled / analyzed. This hole was drilled in the area of a historic shaft. This and similar vein intervals in 2021 drill core will be sampled during the current program.

Intervals with arsenopyrite mineralization in hole Ky-21-27 have been selected for sampling. This hole, drilled at the Elmtree 12 polymetallic vein system, intersected intermittent arsenopyrite between 29.8 meters and 90.1 meters. Company representatives are closely re-examining 2021 drill core for other intervals of arsenopyrite mineralization for sampling.

The Keymet Property hosts the historic Keymet Base Metal - Silver Mine which operated briefly during the 1950s. The mine burnt in the mid 1950s and was never recapitalized. The Keymet Property is located approximately four kilometers north of the historic Nigadoo Mine. The Nigadoo Mine operated during the 1960s and 1970s producing copper, lead, zinc and silver.

Historic Keymet Base Metal - Silver Mine (1950s) - burnt down and was never recapitalized  
Located 8KM away from the historic Nigadoo Mine that operated for over twenty years
