

# Contango ORE Announces Record High \$25 Million in Income from Operations and Cash Position of \$107 Million for the Quarter Ended Sept 30, 2025

13.11.2025 | [CNW](#)

[Contango Ore Inc.](#) ("Contango" or the "Company") (NYSE American: CTGO) announced today that it filed with the Securities and Exchange Commission its Form 10-Q for the quarter ended September 30, 2025 ("Q3-2025").

Rick Van Nieuwenhuysse, President and CEO of the Company, stated, "Production during the third quarter of 2025 continued to exceed quarterly guidance with record high income of \$25 million from operations and adjusted net income<sup>[1]</sup> of \$24.9 million. The Company ended the quarter with \$107 million in cash. During the quarter, 16,669 ounces of gold were sold with cash costs per ounce sold of \$1,402 and all-in-sustaining costs of \$1,597 per ounce sold - below the 2025 target of \$1,625 per ounce. The fourth campaign of 2025 is scheduled to commence on November 19, 2025. We expect the last campaign of the year to be lower than the previous three due to the short run time of the last batch of the year and the onset of winter operating conditions. We are guiding to between 6,000 and 8,000 gold ounces for Contango's 30% share of Q4 production. However, to this we will add the test batch of Manh Choh ore blended with Fort Knox ore, which included 44,447 tons of "low grade oxide" Manh Choh ore grading 0.104 oz/ton blended with typical Fort Knox ore. Recovery in the CIP circuit averaged 94% resulting in 4,366 total gold ounces produced, yielding approximately 1,300 additional gold ounces for Contango's 30% production and will be added to the regular Q4 Campaign in the next quarterly reporting period. Lastly, we are also excited to announce that we have mobilized a drill rig to the Lucky Shot mine site with the first phase of a 15,000-meter underground in-fill drilling program getting underway soon. We expect assay results to start being reported in the first quarter of 2026. This work, along with detailed engineering, hydrology and geotechnical work will form the basis for a feasibility level mine and transportation plan for Lucky Shot, which we are targeting to produce 30,000 to 40,000 ounces of gold per year using our Direct Shipping Ore (DSO) approach. We expect to complete the feasibility study in 12 to 18 months and make a production decision in 2027."
