

Pacific Ridge Intersects 289 m of 0.77% Copper Equivalent or 1.15 g/t Gold Equivalent at Kliyul Copper-Gold Project; Expands Mineralization 110 m to the West

18.11.2025 | [Newsfile](#)

Vancouver, November 18, 2025 - [Pacific Ridge Exploration Ltd.](#) (TSXV: PEX) (OTCQB: PEXZF) (FSE: PQW) ("Pacific Ridge" or the "Company") is pleased to announce that drill hole KLI-25-070 intersected 289.0 m of 0.77% copper-equivalent* ("CuEq") or 1.15 grams per tonne ("g/t") gold equivalent** ("AuEq") at the Company's 100% owned Kliyul copper-gold project ("Kliyul" or the "Project") located in the prolific Quesnel terrane in Northcentral B.C (see Figure 1).

Drilling Highlights:

- Pacific Ridge completed two drill holes, totaling 1,287 m, at Kliyul in 2025 which were focused on infill and resource expansion at the Kliyul Main Zone ("KMZ"). KMZ hosts 334.1 million tonnes ("Mt") grading 0.33% CuEq* (0.15% copper, 0.26 g/t gold, and 0.95 g/t silver) in the Inferred Mineral Resource category (see news release dated August 6, 2025) (see Figure 2).
- Drill hole KLI-25-070 returned 289.0 m of 0.77% CuEq* or 1.15 g/t AuEq** (0.26% copper, 0.75 g/t gold, and 1.54 g/t silver) within 489.8 m of 0.56% CuEq* or 0.84 g/t AuEq** (0.20% copper, 0.53 g/t gold and 1.34 g/t silver) (see Table 1) (see Figure 3).
- Drill hole KLI-25-071 returned 91.0 m of 0.47% CuEq* or 0.70 g/t AuEq** (0.23% copper, 0.35 g/t gold, and 0.93 g/t silver) within 421 m of 0.24 CuEq* or 0.35 g/t AuEq** (0.12% copper, 0.16 g/t gold, and 0.62 g/t silver) (see Table 1) (see Figure 3).
- Drill hole KLI-25-070 is one of the best holes ever drilled at KMZ and filled a 130 m gap between drill holes. It has a high gold g/t: copper % ratio (>2) and is similar in style to drill hole KLI-21-036, which intersected 437 m of 0.64% CuEq* or 0.96 g/t AuEq* (0.22% copper, 0.60 g/t gold and 1.62 g/t silver), and drill hole KLI-21-037 which intersected 566.7 m of 0.51% CuEq* or 0.76 g/t AuEq** (0.20 % copper, 0.44 g/t gold, and 1.39 g/t silver) (see news releases dated December 1, 2021, and January 22, 2022, respectively) (see Figures 4 and 5). Further, it confirmed the presence of a high-grade copper gold mineralized northward-dipping pipe-shaped zone that continues north of the Valley Fault (Figure 4).
- Drill hole KLI-25-071 extended copper-gold mineralization 110 m further west of drill hole KLI-23-068, which intersected 455.8 m of 0.43% CuEq* and 0.64 g/t AuEq** (0.17% copper, 0.27 g/t gold, and 0.93 g/t silver) (see news release dated January 9, 2024), and successfully expanded mineralization within the current mineral resource pit shell (see Figure 5).

"The 2025 drill program at Kliyul, focused on infill and resource expansion at KMZ, was a big success," said Blaine Monaghan, President & CEO of Pacific Ridge. "Drill hole KLI-25-070 returned one of the best intervals ever recorded at KMZ and drill hole KLI-25-071 extended copper-gold mineralization 110 m to the west. The 2026 drill program at Kliyul will focus on continued resource expansion drilling at KMZ and testing a number of drill targets that occur along an under explored 6-km mineralized trend."

Table 1

Kliyul Assay Results Highlights

Hole	From(m)	To(m)	Width(m)	Cu(%)	Au(g/t)	Ag(g/t)	CuEq(%)*	AuEq(g/t)**
KLI-25-70	2.7	492.5	489.8	0.20	0.53	1.34	0.56	0.84
includes	2.7	401.0	398.3	0.23	0.63	1.54	0.66	0.98
includes	110.0	399.0	289.0	0.26	0.75	1.54	0.77	1.15
and	193.0	221.0	28.0	0.34	0.85	2.11	0.92	1.38
and	260.0	345.0	85.0	0.45	1.49	2.50	1.47	2.19
includes	279.5	317.0	37.5	0.67	2.69	3.64	2.49	3.72
includes	378.0	399.0	21.0	0.29	1.44	1.28	1.26	1.89
KLI-25-71	80.0	501.0	421.0	0.12	0.16	0.62	0.24	0.35
includes	170.0	369.0	199.0	0.18	0.25	0.82	0.36	0.54
and	230.0	321.0	91.0	0.23	0.35	0.93	0.47	0.70

*CuEq = ((Cu%) x \$Cu x 22.0462) + (Au(g/t) x AuR/CuR x \$Au x 0.032151) + (Ag(g/t) x AgR/CuR x \$Ag x 0.032151) / (\$Cu x 22.0462).

**AuEq = ((Au(g/t) x \$Au x 0.032151) + ((Cu%) x CuR/AuR x \$Cu x 22.0462) + (Ag(g/t) x AgR/CuR x \$Ag x 0.032151)) / (\$Au x 0.032151).

Commodity prices: \$Cu = US\$4.60/lb, \$Au = US\$2,600/oz., and Ag = US\$30.00/oz.

There has been no metallurgical recovery testing on Kliyul mineralization.

The Company estimates copper recoveries (CuR) of 80%, gold recoveries (AuR) of 60%, and silver recoveries (AgR) of 60%

Factors: 22.0462 = Cu% to lbs per tonne, 0.032151 = Au g/t to troy oz per tonne, and 0.032151 = Ag g/t to troy oz per tonne.

2025 Kliyul Drill Program

The 2025 drill program at Kliyul was focused on infill and resource expansion at KMZ.

KLI-25-070, the first drill hole of the program, was collared south of the Valley Fault (Figure 4) and was designed to test an approximate 130 m gap in drilling north of strong copper-gold mineralization in holes KLI-21-036, which intersected 437 m of 0.64% CuEq* or 0.96 g/t AuEq* (0.22% copper, 0.60 g/t gold and 1.62 g/t silver) (see news release dated December 1, 2021) and KLI-21-037, which intersected 566.7 m of 0.51% CuEq* or 0.76 g/t AuEq** (0.20 % copper, 0.44 g/t gold, and 1.39 g/t silver) (see news release dated January 22, 2022). KLI-25-070 was collared from the same location as KLI-21-036 and drilled at an azimuth of 354° degrees and dip of 80° from an elevation of 1765 m to a depth of 786 m. The hole intersected chalcopyrite and bornite mineralization with quartz-magnetite veins and stockworks (Figure 6) and as disseminations, as well as chalcopyrite +/-bornite and pyrite mineralization associated with epidote and anhydrite veins.

KLI-25-071 was collared west of KLI-23-068, which intersected 455.8 m of 0.43% CuEq* and 0.64 g/t AuEq**, and was designed to test for copper-gold mineralization extensions to the west within the mineral resource estimate pit shell at an azimuth of 180° degrees and dip of 75° from an elevation of 1776 m to a depth of 501 m. Chalcopyrite-pyrite mineralization occurs as disseminations with epidote-magnetite alteration, with quartz-sericite-chlorite veins, quartz-anhydrite veins and locally, quartz-magnetite veins (Figure 7).

Future Exploration at Kliyul

In addition to continued resource expansion drilling at KMZ, Pacific Ridge also plans to test a number of drill targets that occur along an underexplored 6-km mineralized trend, which include, from south to north, M39, Bap Ridge, Parish Hill, Ginger South and Ginger (see Figure 2). Further, the Company also plans on drill testing the Klip target, which is a new target identified in a 2024 ZTEM survey (see Figure 8). The Klip target is located north of KMZ and is named after a historical BC MINFILE occurrence (094D 185), the Klip Occurrence, located 400 m to the west. The Klip Occurrence records a NE-striking shear zone within QSP-altered volcanoclastic rocks. A one metre chip sample taken across the shear zone in 1985 yielded 3.8 g/t gold and 5.3 g/t silver. Pacific Ridge believes that drilling to date has only tested one part of the porphyry system and that most of the system remains hidden and untested to the north.

QA/QC (Quality Assurance/Quality Control)

Pacific Ridge's 2025 exploration program was managed by Equity Exploration Consultants Ltd. of Vancouver, B.C. The drill contractor was Dorado Drilling Ltd. of Vernon, B.C. Half-core HQ (63.5mm) or NQ (47.6 mm) sawed samples from continuous intervals throughout the reported drill holes were sealed on site and shipped to ALS Global Laboratories ("ALS") preparation lab in Terrace, BC. Fire assay and multielement analyses were completed at ALS Minerals analytical laboratory in North Vancouver. Drill core was crushed, pulverized and analyzed for 48 elements using a four-acid dissolution followed by ICP-MS (ME-MS61) with over limits by ore grade four-acid dissolution followed by ICP-AES (OG62), with a 30 g sample analyzed for gold by fire assay and atomic absorption finish (Au-AA23). Blanks and commercially certified reference materials were inserted blind into the sample stream with an overall insertion rate 1 per 40 samples. Alternating pulp and crush duplicates are inserted at a rate of 1 in 20 samples. Pulp and crush duplicates are inserted at 5% insertion rate by the laboratory. The QA/QC results are reviewed as batches are returned from the laboratory and appropriate actions are implemented where required. The QA/QC results for the reported drill holes are acceptable.

About Pacific Ridge

A Fiore Group company, Pacific Ridge's goal is to become British Columbia's leading copper exploration company. The Kliyul copper-gold project, located in the prolific Quesnel terrane close to existing infrastructure, is the Company's flagship project. In addition to Kliyul, Pacific Ridge's project portfolio includes the RDP copper-gold project, the Chuchi copper-gold project, the Onjo copper-gold project, and the Redton copper-gold project, all located in B.C. The Company would like to acknowledge that its B.C. projects are in the traditional, ancestral and unceded territories of the Gitxsan Nation, McLeod Lake Indian Band, Nak'azdli Whut'en, Takla Nation, and Tsay Keh Dene Nation.

On behalf of the Board of Directors,

"Blaine Monaghan"

policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

Forward-Looking Information: This release includes certain statements that may be deemed "forward-looking statements". All statements in this release, other than statements of historical facts, which address exploration drilling and other activities and events or developments that Pacific Ridge Exploration Ltd. ("Pacific Ridge") expects to occur, are forward-looking statements. Forward-looking statements in this news release include plans to continue drilling KMZ and testing a number of other drill targets at Kliyul. Although Pacific Ridge believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those forward-looking statements. Factors that could cause actual results to differ materially from those in forward-looking statements include market prices, exploration successes, and continued availability of capital and financing and general economic, market or business conditions. These statements are based on a number of assumptions including, among other things, assumptions regarding general business and economic conditions, that one of the options will be exercised, the ability of Pacific Ridge and other parties to satisfy stock exchange and other regulatory requirements in a timely manner, the availability of financing for Pacific Ridge's proposed programs on reasonable terms, and the ability of third party service providers to deliver services in a timely manner. Investors are cautioned that any such statements are not guarantees of future performance and actual results or developments may differ materially from those projected in the forward-looking statements. Pacific Ridge does not assume any obligation to update or revise its forward-looking statements, whether because of new information, future events or otherwise, except as required by applicable law.
